Golding, 2017-02-26 This book explains how and where copper and fossil fuels were formed and the likely future for the extraction of copper and coal The colourful chronology of our efforts to extract metals from minerals and energy from fossil fuels is presented from earliest times until the present day The difficult concept of human sustainability is examined in the context of continually decreasing real prices of energy and metals This book integrates the latest findings on our historic use of technology to continually produce cheaper metals even though ore grades have been decreasing Furthermore it shows that the rate of technological improvement must increase if metals are to be produced even more cheaply in the future

Facies Models in Exploration and Development of Hydrocarbon and Ore Deposits Arnold H. Bouma, R. M. Carter, 1991-06 Exploration of natural resources is becoming more and more expensive This means that more scientific approaches are needed using the best techniques available However no single technique can cover any of the objectives Regional approaches necessary to outline a prospective area lack the detail required for exploration detailed methods and techniques lack proper overview A combination of both types of approaches and several techniques within are required to do optimal exploration This book provides a number of examples models of different approaches and styles from different parts of the world giving the reader not only new information but also a view of how different countries emphasize their exploration
