[Ruminants: Antimicrobial Resistance and Microbial Homeostasis](#) Yi Yang,Jilei Zhang,Heba Sayed El-Mahallawy,2024-01-22 Ruminants have been domesticated for thousands of years living alongside and providing many benefits to human beings in various ways They provide food fiber power biomaterials and share in providing traditional medicine for people worldwide However bacterial infections do not only impact domestic and wild animals which may cause economic loss and health issues but also represent a great threat to the health of human beings Moreover due to the inadvertent use of antimicrobials

especially in the treatment of bovine mastitis the resultant antimicrobial resistance is raising our concerns Meanwhile symbiotic bacteria play an important role in the ruminants who have a unique digestive system that allows them to better use energy from fibrous plant material than other herbivores Therefore all of these challenges urge researchers to pay more attention to the emergence and the molecular characterization of pathogenic multidrug resistant bacteria in addition to the gastroenterological microbiome dysbiosis in ruminants The purpose of this Research Topic is to highlight and stimulate discussions regarding the antimicrobial resistance and microbial homeostasis of pathogenic and symbiotic bacteria in ruminants and their products thereby helping us further understand the role of bacteria in the pathological and physiological processes of ruminants In addition more attention should be paid to low cost and effective antimicrobials alternatives for the prevention and or treatment of bacterial diseases in ruminants in order to reduce the potential threat to the health of human beings resulting from the overreliance on antimicrobial therapy
