Chambers, Edward A. Trippel, 2012-12-06 Many of the processes influencing recruitment to an adult fish population or entry into a fishery occur very early in life The variations in life histories and behaviours of young fish and the selective processes operating on this variation ultimately determine the identities and abundance of survivors This important volume brings together contributions from many of the world s leading researchers from the field of fish ecology The book focuses on three major themes of pressing importance in the analysis of the role that the early life history of fishes plays in the number and quality of recruits the selective processes at play in their early life history the contributions of early life history to the understanding of recruitment Darwin's Fishes Daniel Pauly, 2007-08-27 In Darwin s Fishes Daniel Pauly presents an encyclopaedia of ichthyology ecology and evolution based upon everything that Charles Darwin ever wrote about fish Entries are arranged alphabetically and can be about for example a particular fish taxon an anatomical part a chemical substance a scientist a place or an evolutionary or ecological concept The reader can start wherever they like and are then led by a series of cross references on a fascinating voyage of interconnected entries each indirectly or directly connected with original writings from Darwin himself Along the way the reader is offered interpretation of the historical material put in the context of both Darwin s time and that of contemporary biology and ecology This book is intended for anyone interested in fishes the work of Charles Darwin evolutionary biology

Essential Fish Biology Derek Burton, Margaret Burton, 2018 Essential Fish Biology provides an introductory overview of the functional biology of fish and how this may be affected by the widely contrasting habitat conditions within the aquatic environment It describes the recent advances in comparative animal physiology which have greatly influenced our understanding of fish function as well as generating questions that have yet to be resolved Fish taxa represent the largest number of vertebrates with over 25 000 extant species However much of our knowledge apart from taxonomy and habitat descriptions has been based on relatively few of them usually those which live in fresh water and or are of commercial interest Unfortunately there has also been a tendency to base our interpretation of fish physiology on that of mammalian systems as well as to rely on a few type species of fish This accessible textbook will redress the balance by using examples of fish from a wide range of species and habitats emphasizing diversity as well as recognizing shared attributes with other vertebrates
