**Glossary of U.S. Naval Abbreviations** United States. Office of Naval History,1947      Guide to UPSC CAPF Assistant Commandant Paper I & II Disha Experts,2021-09-01      **The microbial ferrous wheel: iron cycling in terrestrial, freshwater, and marine environments** David Emerson, Eric Roden,Benjamin Twining, In the past 15 years there has been steady growth in work relating to the microbial iron cycle It is now well established that in anaerobic environments coupling of organic matter utilization to Fe reduction is a major pathway for anaerobic respiration In iron rich circumneutral

environments that exist at oxic anoxic boundaries significant progress has been made in demonstrating that unique groups of microbes can grow either aerobically or anaerobically using Fe as a primary energy source Likewise in high iron acidic environments progress has been made in the study of communities of microbes that oxidize iron and in understanding the details of how certain of these organisms gain energy from Fe oxidation On the iron scarcity side it is now appreciated that in large areas of the open ocean Fe is a key limiting nutrient thus a great deal of research is going into understanding the strategies microbial cells principally phytoplankton use to acquire iron and how the iron cycle may impact other nutrient cycles Finally due to its abundance iron has played an important role in the evolution of Earth's primary biogeochemical cycles through time The aim of this Research Topic is to gather contributions from scientists working in diverse disciplines who have common interests in iron cycling at the process level and at the organismal level both from the perspective of Fe as an energy source or as a limiting nutrient for primary productivity in the ocean The range of disciplines may include geomicrobiologists microbial ecologists microbial physiologists biological oceanographers and biogeochemists Articles can be original research techniques reviews or synthesis papers An overarching goal is to demonstrate the environmental breadth of the iron cycle and foster understanding between different scientific communities who may not always be aware of one another's work
