

Lecture 22: Punnett Practice

For this lecture you are mostly on your own. Monohybrid crosses were a 7th grade topic. However, this tutorial should help refresh your memory!

Putting your Mendelian In"gene"uity to Work

- With Mendelian genetics, we are dealing with traits where one form is completely dominant to another.
- Recall that **genotype** is an individual's genetic make up while **phenotype** is the physical result of one's genes.
- One's genes come from a combination of two **alleles**, one inherited from mom and one from dad.
- Alleles can be dominant or recessive and are represented alphabetically for discussion and problem solving.
 - If dominant, it is represented by a capital letter.
 - EXAMPLE: A
 - If recessive, the allele is represented by the lower case form of the letter.
 - EXAMPLE: a
- It is possible for an organism to receive two of the same types of alleles from its parents.
- In this case, the organism is **homozygous** for the trait in question
 - The offspring would have either 2 dominant or 2 recessive alleles for the same trait
 - EXAMPLE: AA or aa
 - If the offspring is homozygous dominant, he/she will express the dominant phenotype
 - If the offspring is homozygous recessive, he/she will express the recessive phenotype
- If the organism gets two different alleles, then this organism is said to be **heterozygous** for that trait.
 - The offspring would have 1 dominant and 1 recessive allele for a gene
 - EXAMPLE: Aa
- In a heterozygous organism, the organism's **phenotype** will show the dominant allele.

Now You Practice:

- Example #1: Pea Plant Flower Color
- Mendel's plants had two possible petal colorations.
 - Purple color is the result of a dominant allele (F)
 - White is the result of a recessive allele (f)
 - a. If you have a homozygous purple flower, what is its genotype?
 - b. If you have a heterozygous purple flower, what is its genotype?
 - c. If you have a white flower, what must its genotype be?

It's "Probability" Time to Move On

- **Probability** refers to the likelihood that a particular event will occur.
- More than likely, you are most familiar with probability in terms of odds or chance.
 - EX. What are the odds that a sports team will win the big game?
 - EX. What's the chance you'll have a date for the next dance?
- Geneticists are looking for the odds that an individual will receive a particular allele and its phenotype
- Probability is not exact. But its reliability can be increased with multiple trials (experiments).

The Punnett Square

- Geneticists and biologists use these as a means to organize alleles & calculate probability of the alleles passing to an unborn offspring.
 - It is important to remember that these are used for PREDICTION, not necessarily definite diagnoses.
- To use the Punnett Square, first you need to "choose your cross."
- A **monohybrid cross** is one that only analyzes one set of contrasting traits
