Personalized Interaction on Shared Surfaces Dominik Schmidt,2012-11-04 In this thesis we contribute to the body of surface
computing research by proposing novel methods for user identification We present three novel methods for instantaneous
user identification IdWristbands uses bracelets that emit infrared codes to identify individual finger touches HandsDown is
based on biometrics and allows users to identify by placing their hand flat on the surface and PhoneTouch employs mobile
phones in a stylus like fashion for identified direct touch interaction We use IdWristbands HandsDown and PhoneTouch as
basis for analyzing and exploring the design space of personalized interaction We illustrate its opportunities and benefits by
introducing a wide range of novel user aware interaction techniques In a user study we show that instantaneous user
identification and personalization conveniently facilitate interaction techniques that are otherwise not immediately accessible
