Aleksandra Drizo

Memorandum Paper 1 Agricultural Science 2014:

Blood Relations Jenny Bangham, 2020-12-07 Blood is messy dangerous and charged with meaning By following it as it circulates through people and institutions Jenny Bangham explores the intimate connections between the early infrastructures of blood transfusion and the development of human genetics Focusing on mid twentieth century Britain *Blood Relations* connects histories of eugenics to the local politics of giving blood showing how the exchange of blood carved out networks that made human populations into objects of medical surveillance and scientific research Bangham reveals how biology was transformed by two world wars how scientists have worked to define racial categories and how the practices and rhetoric of public health made genetics into a human science Today genetics is a powerful authority on human health and identity and *Blood Relations* helps us understand how this authority was achieved *Global Agriculture and the American Farmer* Kimberly Ann Elliott, 2017-06-27 The United States is one of the world's largest producers and exporters of a range of agricultural commodities and the largest provider of foreign assistance so U S policies have big effects on global food security and other global public goods linked to agriculture On the positive side of the ledger President Obama created the Feed the Future aid initiative to promote agricultural development in poorer countries as a tool to achieve the global goals of ending hunger and extreme poverty which are mostly rural But that generosity is undercut by U S support for farmers that distorts global markets and ignores negative spillovers for the rest of the world In this book Elliott focuses on three policy areas that are particularly damaging for developing countries traditional agricultural subsidy and trade policies that support the incomes of American farmers at the expense of farmers elsewhere the biofuels mandate which in its current form increases market volatility while doing little if anything to mitigate climate change and weak regulation of antibiotic use in livestock which contributes to the global spread of drug resistant super bugs While noting that broad reforms are needed to fix these problems Elliott also identifies practical steps that U S policymakers could take in the relatively short run to improve farm policies for American taxpayers and consumers as well as for the poor and vulnerable in developing countries

Yearbook of International Organizations 2014-2015, Volumes 1a & 1b (Set) Union of International Associations, 2014-06-16 Volume 1 A and B covers international organizations throughout the world comprising their aims activities and events **Environmental Water Markets and Regulation** Katherine Owens, 2016-11-18 River systems around the world are degraded and are being used unsustainably Meeting this challenge requires the development of flexible regimes that have the potential to meet essential consumptive needs while restoring environmental flows This book focuses on how water trading frameworks can be repurposed for environmental water recovery and aims to conceptualise the most appropriate role for law in supporting recovery through these frameworks The author presents a comprehensive study of the legal frameworks in four jurisdictions the States of Oregon and Colorado in the western United States the province of Alberta in Canada and the Murray Darling Basin in Australia Basin State of New South Wales A close comparative analysis of these

four jurisdictions reveals a variety of distinctive regulatory arrangements and collaborations between public and private actors. In all cases the law has been deployed to steer and coordinate these water governance activities. The book argues that each regime is based on a particular regulatory strategy with different conceptions of the appropriate roles for and relationships between various actors and institutions. Legal frameworks do not have the capacity to rationalise and provide an overarching and absolute solution to the complex environmental and governance issues that arise in the context of environmental water transactions. Rather the role of law in this context needs to be reconceptualised within the paradigm of regulatory capitalism as establishing and maintaining the limits within which regulatory participants can operate, innovate and collaborate.

Phosphorus Pollution Control Aleksandra Drizo, 2019-10-16 Phosphorus Pollution Control Policies and Strategies. Deterioration and decline of water resources due to pollution caused by humans and their activities has become a universal health, environmental, social and economic problem. Excess discharges of nutrients, in particular phosphorus, has been recognized as the most prevalent water pollution problem globally. Moreover, its perpetual occurrence and expansion creates imminent threats to water and food security. Despite extensive research during the past five decades, many key questions in eutrophication science remain unanswered. This book summarizes the most recent policies and strategies for phosphorus removal and recovery from municipal, residential and agricultural wastewater effluents and runoff into a concise and up-to-date volume. The book will be of interest to environmental and water resources scientists and engineers, consultants, policy makers and practitioners working in the field.

Africa's Lions Haroon Borat, Finn Tarp, 2016-11-08 Examining the economic forces that will shape Africa's future. *Africa's Lions* examines the economic growth experiences of six fast-growing and/or economically dominant African countries. Expert African researchers offer unique perspectives into the challenges and issues in Ethiopia, Ghana, Kenya, Mozambique, Nigeria and South Africa. Despite a growing body of research on African economies, very little has focused on the relationship between economic growth and employment outcomes at the detailed country level. A lack of empirical data has deprived policymakers of a robust evidence base on which to make informed decisions. By harnessing country-level household, firm and national accounts data together with existing analytical country research, the authors have attempted to bridge this gap. The growth of the global working-age population to 2030 will be driven primarily by Africa, which means that the relationship between growth and employment should be understood within the context of each country's projected demographic challenge and the associated implications for employment growth. A better understanding of the structure of each country's workforce and the resulting implications for human capital development, the vulnerably employed and the working poor will be critical to informing the development policy agenda. As a group, the six countries profiled in *Africa's Lions* will largely shape the continent's future. Each country chapter focuses on the complex interactions between economic growth and employment outcomes within the individual *Africa's Lions* context.
