

Please read all the instructions before starting work on your project.

The risk assessment project is broken down into a number of stages, which should flow from start to finish, telling a complete story of your **work area** and the **hazards, risks and their required controls** within it.

Please use the risk assessment template below for this process.

For this risk assessment project, it is important that you only choose hazards that are not currently adequately controlled.

Your risk assessment **must** show the following about your work area:

- o Details of the work area being assessed; o The tasks being performed in the work area;
- o A listing of four (4) hazards in the work area, with each one followed through the risk assessment process;
- o List who may be harmed by the hazard; o State how they may be harmed; o Describe the risk controls already in place o Calculate a risk rating -- using the IOSH 5 x 5 matrix; o Describe any additional controls needed;
- o Calculate a risk rating for the new controls (the residual risk); o State who will action or monitor any further controls; o State when the actions or monitoring needs to take place.

In addition it must also show the following basic information:

- o Your name;
- o Date and time of the risk assessment; o Your training provider's name; o Your signature; o The risk assessment review date.

Malpractice

What you must not do (Plagiarism, cheating, etc.)

Any work that the tutoring team believe to be copied from other materials and not the students own work/words will be investigated as malpractice.

If the malpractice is found to be correct the student's exam/project will be voided and the student will lose one of their two attempts at the exam/project.

Quantum Safety Paul Stretton, 2022-02-22 This book is the most comprehensive review of health and safety in half a century Most organisational approaches to health and safety are based on the methodology developed during the 1970s and despite the workplace changing beyond recognition since that time these approaches have remained untouched *Quantum Safety* will develop a new understanding fit for the modern workplace *Quantum Safety* is an approach that is part of the new view debate There have been a number of other new approaches to health and safety in recent years and while they all have merit and improve understanding to help create the optimal safe working environment they have failed to significantly create the change desired These approaches are often flawed at the philosophical or conceptual level or propose a solution without a pathway to implement the principles in safety critical environments *Quantum Safety The New Approach to Risk Management for the Complex Workplace* is founded on a

wholesale critical analysis of the conceptual foundations of health and safety before translating the revised principles into a tangible methodology Central to the development of Quantum Safety is the application of Complexity Science The traditional approach to health and safety is considered to be Newtonian it uses linear models and deterministic analysis Quantum Safety due to the full consideration of Complexity Science introduces multidimensional models and develops analysis based on probabilities Crucially this does not render Newtonian methodologies as worthless in the same manner that Newtonian physics was able to take mankind to the moon but required the quantum understanding within computers to make it possible Quantum Safety provides the mechanisms to complete organisations safety based journeys The new mechanisms are fully developed for the reader at both macro and micro levels How an organisation measures safety and what it values are reset and re examined How we investigate adverse events and the consequential actions taken with employees to develop a true Just Culture within a high performing culture are also completely revised Essentially Quantum Safety creates a pathway for understanding health and safety in the complex modern world To achieve that new models are introduced to replace the dated simple tools and a new language is developed to communicate this powerful approach It will help propel an organisation from considering safety within a concept of industrialised failure avoidance to valuing safety as an integrated aspect of high performance
