Local, Traditional and Indigenous Food Systems in the 21st Century to Combat Obesity, Undernutrition and

Climate Change, 2nd edition Rebecca Kanter, Sofia Boza, Gina Kennedy, 2023-07-31 Traditional and indigenous food systems have existed for centuries and were in balance with local food supplies globally. However, between the mid 20th and early 21st century, the green revolution dramatically altered food production, which in turn affected the inclusivity of traditional production systems within food systems and subsequently traditional dietary intakes. This change was accompanied by lifestyle changes and spurred a global nutrition transition. Today, the world faces a global syndemic of obesity, undernutrition, and climate change. A new call to action to create food systems that nourish people and sustain the planet is needed. Traditional and indigenous food systems have long been recognized as systems that can both support good human nutrition as well as maintain a balance with nature. There is an underutilized knowledge base around traditional and indigenous food systems. This includes the knowledge of nutritious species, traditional culinary preparations, and cultural practices. Greater agricultural production of underutilized species can result in more sustainable agricultural and food systems, which can also help improve livelihoods and food security. Traditional and indigenous cultural practices with respect to both land and water management, as well as culinary practices, contribute to both sustainable food production and consumption. These practices require a greater evidence base in order to be incorporated into public health nutrition initiatives related to improving dietary quality, such as food-based dietary guidelines, for example. An increased focus on the importance of local traditional and indigenous food systems and nutrition could therefore help countries to improve human nutrition and ideally help mitigate the global syndemic of obesity, undernutrition, and climate change. This Research Topic will focus on documenting diverse local food systems and promoting elements within them that can help improve nutrition and health, both human and planetary, in various ways, including the livelihood development of knowledge holders. **Forest**

Conservation and Sustainability in Indonesia Bernice Maxton-Lee, 2020-03-20 Despite carefully constructed conservation interventions, deforestation in Indonesia is not being stopped. This book identifies why large-scale international forest conservation has failed to reduce deforestation in Indonesia and considers why key stakeholders have not responded as expected to these conservation interventions. The book maps the history of deforestation in Indonesia in the context of global political economy, exploring the relationship between international trade, the interests and ideology behind global sustainability programmes, and the failures of forest conservation in Indonesia. Global economic and political ideologies are shown to have profoundly shaped deforestation. The author argues that the same forces continue to prevent positive outcomes. Case study chapters analyse three major international programmes: Reducing Emissions from Deforestation and Forest Degradation (REDD), the Norway-Indonesia bilateral partnership, and the Roundtable on Sustainable Palm Oil (RSPO) in Indonesia. The findings provide insight into the failures of global climate change policy and suggest how the book's theoretical model can be used to analyse other complex environmental problems. The book is a useful reference for students of environmental science and policy, political theory, international relations, development, and economics. It will also be of
