countries In the absence of formal mechanisms for collaboration the transboundary nature of this basin makes sound water resources development challenging The large seasonal and inter annual variability of the river flow exacerbates those challenges A further complication is the high sediment load in the Eastern Nile rivers during the high flow season This study contributes to fill relevant knowledge gaps through a better understanding of the methods needed for a complex system of multipurpose reservoirs considering both water quantity and sediment load The study quantifies the impacts of water resources development in the Eastern Nile basin and identifies system management options at both regional and country level Developing a collaborative and unified perspective of the countries towards new projects can be beneficial for all New operation rules are proposed for improving operation of the current system when new infrastructures are developed and operated either unilaterally or ideally cooperatively
