### **Roadmap for Global Sustainability – Rise of the Green Communities**

Salah El-Haggag, Aliaa Samaha, 2019-05-08 Progressive increases in consumer demands along with aggressive industrial consumption led the world to proximate resource depletion weather changes soil and air degradation and water quality deterioration We now know that the paradigm of production at the expense of human condition is not sustainable This book briefly explains how we reached this situation and offers suggestions as to what can be done to overcome it It invites the best entrepreneurial talent and scientific and technological know how to develop a sustainable economy around sustainable communities services and sectors A major obstacle previously identified by involved parties was the ability of accommodating for the emerging economic growth without causing harm to the environment especially with resource depletion This book provides the solution by creating a need to bring on a new revolution that preserves the rights of next generations to live in a healthy environment This Sustainability Revolution requires the integration of economic environmental and social factor as well as the practical aspects of implementing sustainability through green activities which are discussed throughout the book

In this book a globalization is proposed that encourages creativity and innovation towards sustainability. With this global sustainability approach, real globalization, both rich and poor, will benefit from the global sustainability approach. This will close the gap between rich and poor. Developing countries could reap the benefit of current technology without undergoing many of the growing pains associated with development of these technologies. Governments are able to better work together towards common goals now that there is an advantage in cooperation, an improved ability to interact and coordinate, and a global awareness of issues. The book presents a sustainability roadmap to bring together various concepts that have been dealt with independently by previous authors and link them to establish the fundamental practical steps. The flow path and the direction for successful implementation of a sustainability roadmap are also discussed in detail in the book. For the first time, the authors use sustainable communities to create a better quality of life for residents while minimizing the use of the resources to meet current needs and ensure adequate resources for future generations. These green communities create new industries for the local economy and improve public health, which offers more hope for their citizens. Sustainable transportation, renewable energy, recycling, clean water, and urban forests help to make a more livable community and help to control the global climate change. They involve all citizens and incorporate local values into decision making. Sustaining Human Progress Khalid Malik, 2014. This report looks at how technology and innovation achieves inclusive and sustainable industrial development. ISID. Its main finding is that ISID is feasible and technology can simultaneously serve all three dimensions of sustainability including economic, social, and environmental. Rapid inclusive and sustainable industrialization can happen more frequently provided that policymakers firmly steer the industrialization process with opportune policies and avoid past mistakes. In some cases, the spread of technology has not materialized in concrete growth opportunities because of the lack of technological capabilities. Innovation needs to be supported by interventions strengthening the process from invention to adoption as capabilities are developed and high tech manufacturing sectors are created, seeing higher rates of sustainable growth. **Radio News**, 1921.
