the recent evolution of techniques AF ablation is becoming the first therapeutic option in many centres worldwide Pulmonary vein isolation PVI for paroxysmal AF is now well established Additional methods are now rising with non PV trigger ablation such as drivers posterior wall isolation epicardial ablation Recognition of physiopathological signature for AF is the next challenge for all rythmologists This will be achieved only by collecting different inputs such as imagery and mapping This Research Topic will focus on how to define a persistent AF ablation strategy and evaluate its outcome What is the role of pre ablation imagery MRI ultrasound CT in elaborating an AF ablation strategy Could post ablation imagery be a tool to evaluate the success of an ablation Furthermore the different and complex mechanisms initiating and maintaining AF are still under investigation leading to the absence of consensus for ablation treatment What are the roles played by the new mapping tools along with their algorithms regarding the outcome of ablation The recent development of new ablation technologies catheters such as Pulse Field Ablation and Radiofrequency balloon are bringing a lot of questions regarding long term results of PVI and non PV trigger ablation

Ministry of Defence,2014 **Les crustacés décapodes des Petites Antilles** Joseph Poupin,2018 The Lesser Antilles are an almost homogeneous insular

region situated at the core of the Caribbean identified as a remarkably rich biodiversity hotspot of the western Atlantic. Featuring a total of more than one thousand crustacean species, *Les Crustacés des Petites Antilles* presents for the first time the documented inventory of the shrimps, lobsters, hermit crabs, and crabs of the region. This French language inventory is based on a literature search of roughly six hundred scientific contributions published over more than two centuries and integrates American, French, Dutch, and Venezuelan research efforts. Also included are some unpublished data from recent expeditions to the French islands of Saint Martin, Guadeloupe, and Martinique. Readers will find an up-to-date list of the species that both complies with the latest taxonomic revisions and supplies the source of each record. An analysis of the list provides a sampling history of the islands, the result of the inventory presented by families, islands, and archipelagos; documentation of the major ecological habitats; a zoogeographic appraisal distinguishing marine and freshwater fauna; and the prospects for new discoveries of undescribed species. This work illustrates many species in color with photographs taken in the laboratory and in the field.
