NATO and Transatlantic Relations in the 21st Century Michele Testoni, 2020-12-30 This book explores the evolution and future relevance of NATO from the perspective of the member states Addressing the overarching question of the relevance of transatlantic relations in the 21st century the volume has three core objectives The first is to reinforce the view that international alliances serve not only an external oriented goal but also a domestic oriented aim which is to control others behaviour The second is to show that tensions amongst NATO allies have become more acute and therefore more dangerous The third is to discuss current transatlantic relations through the adoption of a second image perspective that is one that emphasizes the multiple vertical linkages that connect NATO to the politics and the policies of each ally The chapters presented here are built on a dual approach on the one hand they look at the place the Alliance occupies in the domestic public debate and the strategic culture of specific member states on the other they analyze how each of these countries contributes to NATO's operations and what interests and visions they share for the Alliance's future This book will be of much interest to students of NATO international organizations foreign policy and security studies in general

Role of Lipids in Virus Assembly Jamil S.

Saad, Delphine M. Muriaux, 2015-07-28 RNA enveloped viruses comprise several families belonging to plus and minus strand RNA viruses such as retroviruses, flavoviruses and orthomyxoviruses. Viruses utilize cellular lipids during critical steps of replication like entry, assembly and egress. Growing evidence indicates important roles for lipids and lipid nanodomains in virus assembly. This special topic covers key aspects of virus membrane interactions during assembly and egress, especially those of retroviruses and Ebola virus (EBOV). Virus assembly and release involve specific and nonspecific interactions between viral proteins and membrane compartments. Retroviral Gag proteins assemble predominantly on the PM. Despite the great progress in identifying the factors that modulate retroviral Gag assembly on the PM, there are still gaps in our understanding of precise mechanisms of Gag membrane interactions. Studies over the last two decades have focused on the mechanisms by which other retroviral Gag proteins interact with membranes during assembly. These include human immunodeficiency virus (HIV), Rous sarcoma virus (RSV), equine infectious anemia virus (EIAV), Mason-Pfizer monkey virus (M-PMV), murine leukemia virus (MLV) and human T-lymphotropic virus type 1 (HTLV-1). Additionally, assembly of filoviruses such as EBOV also occurs on the inner leaflet of the PM. The articles published under this special topic highlight the latest understanding of the role of membrane lipids during virus assembly, egress and release.
