**Postsecondary Universe** Clifford Adelman,2000 This report describes a new system of credentialing that has arisen in the information technology and telecommunications industries over the past decade It compares this system to traditional higher education identifying both similarities and dissimilarities and points to some cases in which the two interact The summary section of this report emphasizes the major themes of the certification system and its relationship to higher education 1 The system is global and operates in many languages 2 The student not the institution is at the center of the system 3 The system has brought competency based education and performance assessment to a status they have never enjoyed within traditional higher education 4 Certification replace neither experience nor degrees and the IT system does not pretend to be higher education the summary also indicates the critical need for more information on certification candidates and providers of course work since the new system is now large enough to play a role in state and national planning for postsecondary education HoF text adopted      Access 97 - No Experience Required Robinson,1998      **American Book Publishing**

Andrew Blyth,Gerald L. Kovacich,2013-04-17 When you first hear the term Information Assurance you tend to conjure up an image of a balanced set of reasonable measures that have been taken to protect the information after an assessment has been made of risks that are posed to it In truth this is the Holy Grail that all organisations that value their information should strive to achieve but which few even understand Information Assurance is a term that has recently come into common use When talking with old timers in IT or at least those that are over 35 years old you will hear them talking about information security a term that has survived since the birth of the computer In the more recent past the term Information Warfare was coined to describe the measures that need to be taken to defend and attack information This term however has military connotations after all warfare is normally their domain Shortly after the term came into regular use it was applied to a

variety of situations encapsulated by Winn Schwartau as the three classes of Information Warfare Class 1 Personal Information Warfare Class 2 Corporate Information Warfare Class 3 Global Information Warfare Political sensitivities lead to warfare being replaced by operations a much more politically correct word Unfortunately operations also has an offensive connotation and is still the terminology of the military and governments [The British National Bibliography](#) Arthur James Wells,2009
