

A Spectrophotometer

A **spectrophotometer** measures the amount of light absorbed by a sample.

Here's how it works:

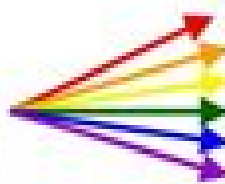

1. A light bulb emits white light

2. Light passes through a slit to form a narrow beam

3. A diffraction grating separates the colors of light

4. Another slit allows just one color to pass

5. Light passes through the sample

6. A detector measures the final amount of light
