OECD Reviews of Evaluation and Assessment in Education: Student Assessment in Turkey Kitchen

Hannah, Bethell George, Fordham Elizabeth, Henderson Kirsteen, Li Richard Ruochen, 2019-09-09 Turkey's education system stands out internationally as a success story. In recent decades participation has been vastly expanded becoming universal at lower levels of schooling and outperforming other middle income countries in upper secondary education. However the education system is also marked by disparities with only around half of 15 year olds acquiring the essential competencies they need for life and work. *Algorithms and Discrete Applied Mathematics* Daya Gaur, N.S. Narayanaswamy, 2017-01-24

This book constitutes the proceedings of the Third International Conference on Algorithms and Discrete Applied Mathematics CALDAM 2017 held in Goa India in February 2017. The 32 papers presented in this volume were carefully reviewed and selected from 103 submissions. They deal with the following areas: algorithms, graph theory, codes, polyhedral combinatorics, computational geometry and discrete geometry. **Mathematical Advances Towards Sustainable Environmental**

Systems James N. Furze, Kelly Swing, Anil K. Gupta, Richard H. McClatchey, Darren M. Reynolds, 2016-12-11 This edited volume focuses on how we can protect our environment and enhance environmental sustainability when faced with changes and pressures imposed by our expansive needs. The volume unites multiple subject areas within sustainability enabling the techniques and philosophy in the chapters to be applied to research areas in environmental science, plant sciences, energy, biodiversity and conservation. The chapters from expert contributors cover topics such as mathematical modelling tools used to monitor diversity of plant species and the stability of ecosystem services such as biogeochemical cycling. Empirical research presented here also brings together mathematical developments in the important fields of robotics including kinematics, dynamics, path planning, control, vision and swarm robotics. Through this book readers will also discover about rainfall runoff modelling which will give them a better idea of the effects of climate change on the sustainability of water resources at the watershed scale. Modelling approaches will also be examined that maximize readers' insights into the global problem of energy transition i.e. the switch to an energy production system using renewable resources only. Collective and discrete insights are made to assist with synergy which should progress well beyond this book. Insight is also given to assist policy formations, development and implementations. The book has a strong multi-disciplinary nature at its core and will appeal to both generalist readers and specialists in information technology, mathematics, biology, physics, chemistry and environmental sciences. Physical Agents in the Environment and Workplace Gaetano Licitra, Giovanni d'Amore, Mauro

Magnoni, 2018-04-17 This book explores environmental physical agents and their potential effect on public and occupational health. It considers the theory, current research and applications of physical agents including noise, ionizing radiation protection and non-ionizing radiation protection and explores the monitoring, measurement, modeling and mitigation of each of these features. Covers all three physical agents in one comprehensive book. Presents the latest results from research as

Into a Deeper Understanding of Evolutionary Computing: Exploration, Exploitation, and Parameter Control Abdul Hanif Abdul Halim, Swagatam Das, Idris Ismail, 2025-01-17 This book delves into fundamental and advanced strategies for enhancing evolutionary and metaheuristic algorithms focusing on the crucial balance between exploration and exploitation in search mechanisms As technological advancements increase optimization complexity effectively managing this balance becomes essential for achieving optimal solutions within reasonable computational resources The book's distinctive structure organizes content according to optimization stages and processes offering a comprehensive discussion of various approaches supported by extensive literature The authors note a scarcity of literature addressing the trade offs between exploration and exploitation with contemporary references making this work particularly valuable It aims to deepen the reader's understanding of evolutionary computing emphasizing exploration exploitation and parameter control It is relevant not only to algorithm developers and the evolutionary computation community but also to students and researchers across scientific disciplines The book is designed to be accessible to those without extensive algorithm development backgrounds providing theoretical and practical insights into optimization methods

Inequalities and the Paradigm of Excellence in

Academia Fiona Jenkins, Barbara Hoenig, Susanne Maria Weber, Andrea Wolfram, 2022-06-30 This volume examines the criteria of excellence producing inequalities of gender in the daily working environment and evaluation of academics Policymakers have increasingly placed emphasis on gender equality as part of a strategy for achieving research excellence and efforts to reduce gender bias have become mainstream This book suggests that this goal has remained elusive in practice due to continuing under representation of women across many academic and scientific fields Questioning the old structures of male dominance still prevalent in national research policy the book explores the effects of institutional values and practices on the careers of academics particularly the academic identities of women and their career developments It focuses on case studies drawn from Europe while also highlighting the rise of new forms of public management and a neoliberal framing of the value of academic work that have a much broader global reach Using participatory research the book analyses contemporary forms of gendered excellence in an intersectional and international perspective It will be of interest to junior senior researchers teachers and scholars in sociology education gender studies history political science and science and technology studies
