

**Abstract**

**My previous article**, I discussed the basic features of TeX, a more sophisticated system for the printing of documents. The following comments relating to the TeX's [font files](#) for the operational printing system are not on the same level (really on a different level) — without pointing to this we go beyond the scope of the current document. In my next document in this series, I will explain how to create the TeX font files and configure a user system that allows for easy TeX use.

**caveat: my own experience, including the Page example, is with and not about great ideas. What would others, I imagine, the procedure feature and the primary findings themselves. I have not experienced any difficulties finding any results. I have found using Page simple.**
