Hou, Mohammad Mahdi Najafpour, Gary F. Moore, Suleyman I. Allakhverdiev, 2017-05-16 To address the environmental socioeconomic and geopolitical issues associated with increasing global human energy consumption technologies for utilizing renewable carbon free or carbon neutral energy sources must be identified and developed Among renewable sources solar energy is quite promising as it alone is sufficient to meet global human demands well into the foreseeable future However it is diffuse and diurnal Thus effective strategies must be developed for its capture conversion and storage In this context photosynthesis provides a paradigm for large scale deployment Photosynthesis occurs in plants algae and cyanobacteria and has evolved over 3 billion years The process of photosynthesis currently produces more than 100 billion tons of dry biomass annually which equates to a global energy storage rate of 100 TW Recently detailed structural information on the natural photosynthetic systems has been acquired at the molecular level providing a foundation for comprehensive functional studies of the photosynthetic process Likewise sophisticated spectroscopic techniques have revealed important mechanistic details Such accomplishments have made it possible for scientists and engineers to construct artificial systems for solar energy transduction that are inspired by their biological counterparts The book contains articles written by experts and world leaders in their respective fields and summarizes the exciting breakthroughs toward understanding the structures and mechanisms of the photosynthetic apparatus as well as efforts toward developing revolutionary new energy conversion technologies The topics chapters will be organized in terms of the natural sequence of events occurring in the process of photosynthesis while keeping a higher order organization of structure and mechanism as well as the notion that biology can inspire human technologies For example the topic of light harvesting will be followed by charge separation at reaction centers followed by charge stabilization followed by chemical reactions followed by protection mechanisms followed by other more specialized topics and finally ending with artificial systems and looking forward As shown in the table of contents TOC the book includes and integrates topics on the structures and mechanisms of photosynthesis and provides relevant information on applications to bioenergy and solar energy transduction *The Supreme Court of Ghana Law Reports*, 2015

substantive grounds such as unreasonableness be expanded and intensified Jowell Elliott and Varuhas all agree with Taggart that proportionality should not sweep the rainbow but propose different schemes for organising and conceptualising substantive review Groves and Weeks and Hoexter evaluate the state of substantive review in Australia and South Africa respectively The second theme concerns the broader Canadian sense of substantive review including the illegality grounds and whether deference should extend to these grounds Cane and Aronson consider the relevance and impact of different constitutional and doctrinal settings Wilberg and Daly address questions concerning when and how deference is to operate once it is accepted as appropriate in principle Rights based review is discussed in a separate third part because it raises both of the above questions Geiringer Sales and Walters examine the choices to be made in settling the approach in this area each focusing on a different dichotomy Taggart's work is notable for treating these various aspects of substantive review as parts of a broader whole and for his search for an appropriate balance between judicial scrutiny and administrative autonomy across this entire area By bringing together essays on all these topics this volume seeks to build on that approach
