Freedom's Laboratory Audra J. Wolfe, 2020-08-04 The Cold War ended long ago but the language of science and freedom continues to shape public debates over the relationship between science and politics in the United States Scientists like to proclaim that science knows no borders Scientific researchers follow the evidence where it leads their conclusions free of prejudice or ideology But is that really the case In Freedom's Laboratory Audra J Wolfe shows how these ideas were tested to their limits in the high stakes propaganda battles of the Cold War Wolfe examines the role that scientists in concert with administrators and policymakers played in American cultural diplomacy after World War II During this period the engines of US propaganda promoted a vision of science that highlighted empiricism objectivity a commitment to pure research and internationalism Working both overtly and covertly wittingly and unwittingly with governmental and private organizations scientists attempted to decide what exactly they meant when they referred to scientific freedom or the US ideology More frequently however they defined American science merely as the opposite of Communist science Uncovering many startling episodes of the close relationship between the US government and private scientific groups Freedom's Laboratory is the first work to explore science's link to US propaganda and psychological warfare campaigns during the Cold War Closing in the present day with a discussion of the 2017 March for Science and the prospects for science and science diplomacy in the Trump era the book demonstrates the continued hold of Cold War thinking on ideas about science and politics in the United States

Earthquakes and Multi-hazards Around the Pacific Rim, Vol. I Yongxian Zhang, Thomas Goebel, Zhigang Peng, Charles A. Williams, Mark Yoder, John B. Rundle, 2017-12-20 This is the first of two volumes devoted to earthquakes and multi hazards around the Pacific Rim The circum Pacific seismic belt is home to roughly 80% of the world's largest earthquakes making it the ideal location for investigating earthquakes and related hazards such as tsunamis and landslides Gathering 16 papers that cover a range of topics related to multi hazards the book is divided into three sections earthquake physics earthquake simulation and data assimilation and multi hazard assessment and earthquake forecasting models The first section includes papers on laboratory derived rheological parameters as well as seismic studies in the Gulf of California and China In turn the second section includes papers on improvements in earthquake simulators as well as the statistical methods used to evaluate their performance automated methods for determining fault slip using near field interferometric data variabilities in earthquake stress drops in California and the use of social media data to supplement physical sensor data when estimating local earthquake intensity The final section includes a paper on probabilistic tsunami hazard assessment several papers on time dependent seismic hazard analysis around the Pacific Rim and a paper on induced and triggered seismicity at the Geysers geothermal field in California Rapid advances are being made in our understanding of multi hazards as well as the range of tools used to investigate them This volume provides a representative cross section of how state of the art knowledge and tools are currently being applied to multi hazards around the Pacific Rim The material here should be of

interest to scientists involved in all areas of multi hazards particularly seismic and tsunami hazards In addition it offers a valuable resource for students in the geosciences covering a broad spectrum of topics related to hazard research

Property Rights in Outer Space Matthew Johnson,2024-05-28 This book explores the role of private mining rights in the utopian imaginary of space colonisation It presents a transdisciplinary account of the new and evolving legislative frameworks that have been established in anticipation of commercial exploitation of the mineral resources of the off world frontier Written in an engaging style the book investigates a novel case study in the history of capitalism and the commons the emergence of a nascent space mining industry undergirded by a contentious legislative framework In 2015 the US passed laws that would recognise the claims of US corporations to own and sell space resources This unilateral act of pre emptive law making would appear to contravene the terms of the UN Outer Space Treaty 1967 which declared that the exploration and use of outer space should be for the benefit of all mankind and not subject to national appropriation Using this central dynamic between privately held mining rights and outer space as a global commons Matthew Johnson constructs an historical sociology of space mining from the deep historical roots of common and private property to the contemporary networks of neoliberalism that have engaged with the commercialisation of space activity The anticipatory expansion of private property claims beyond the Earth both resonates with and problematises the terrain of political history such as the tensions between states and markets public law and private power the commons and exclusive property The emerging cosmopolitics of off world private property mirrors and is often explicitly embedded within neoliberal geopolitics prompting urgent questions about how we can reaffirm principles of democracy and common heritage in the international laws of Earth and space This book is compelling reading for anyone interested in the social study of space law economics technology politics and property rights

A Short Introduction to Geospatial Intelligence Jack O'Connor,2023-10-27 A Short Introduction to Geospatial Intelligence explains the newest form of intelligence used by governments commercial organizations and individuals Geospatial intelligence combines late 20th century historically derived ways of thinking and early 21st century technologies of GIS GPS digital imaging satellites and communications satellites to identify measure and analyze the current risk in the world These ways of thinking have developed from military engineering cartography photointerpretation and imagery analysis While the oldest example dates back to the early 16th century all the ways of spatial thinking share the common thread of being developed and refined during conflicts to help military leaders make informed decisions prior to action In the 21st century thanks in great part to advances in digital precision technology miniaturization and the commercialization of satellites these ways of thinking have expanded from the military into various other industries and sectors including energy agriculture environment law enforcement global risk assessment and climate monitoring Features Analyzes human and algorithmic models for dealing with the challenge of analytic attention in an age of geospatial data overload Establishes an original model envisioning discovery recording comprehending and tracking for the
