Kustom Pro Laser II Manual:

Use of Speed Monitoring and Communications Display for Traffic Control Jon Michael Wertjes, 1996 A research report to identify or develop a speed monitoring display suitable for use in interstate highway work zones evaluate the display's effectiveness in reducing speeds in interstate work zones A review of the literature current practice was conducted to identify product availability other state transportation use Speed monitoring display alternatives were identified evaluated according to essential requirements project evaluation criteria A lidar laser radar device was tested with a changeable message sign The speed monitoring display was effective in reducing speeds higher than 70 mph ITS Data Quality Brian L. Smith, 2003 The Virginia Department of Transportation VDOT has made significant investments in the traffic monitoring infrastructure that supports intelligent transportation systems ITS The purpose of this infrastructure is to provide accurate real time information on the status of the transportation system thus it is critical that the monitoring infrastructure provide accurate data Although detectors are usually tested immediately after installation it is well known that they operate in a very harsh environment and thus are susceptible to degradation in accuracy and or complete failure Consequently a long term commitment to data quality assurance is required through maintenance data quality assessment testing and repair replacement The quality of data from ITS applications is becoming increasingly important as the data are more widely used Not only is the data used in real time operations but also in myriad other often more traditional transportation applications The purpose of this research project was to develop a procedure that VDOT could use to assess its ITS data quality The report includes a data quality assessment procedure that is based on theory practice and empirical investigation The procedure has the following key features benchmark data collection using temporary installation of non intrusive detectors data quality assessed at the lane level to pinpoint problem detectors data quality assessed at the 1 minute interval or minimum practical measurement interval level to provide sufficient quantities of data in reasonable periods of time analysis techniques including both measures and plots which provide quantitative and visual indications of data quality The authors recommend that VDOT begin to use the procedure on both an ad hoc basis and in a statewide program as a means of protecting its significant investment in ITS data collection **Florida Administrative Register**, 2008-08 **Florida Administrative Weekly**, 2004 **Popular Science**, 2000-10 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better **Procedure for Establishing No Passing Zones** Richard L.
