

ARTICLE CRITIQUE

Introduction

The understanding of the differences in sex drive can help to explain the changes in human relationships, especially when it comes to sex. The growing number of gays and lesbians in the recent years has made social scientists and psychologists come up with an explanation of the proliferation of people who are ascribing to homosexuality than ever. The understanding of sex drive in both men and women can help to bring out the conundrum in the shifting relationship boundaries. Several studies have already indicated that men's sex drive was more leaned towards the opposite sex while women tended to lean with equal intensity to both sexes. This paper is a critic of an article that seeks to find out whether higher sex drive is associated with the increased sexual attraction in both men and women.

The primary problem of the article which formed the basis of the research was to find out whether sex drive was related to the increase of sexual attraction of individuals towards both men and women. The problem of the study is based on the literature review presenting a number of findings on the problem. Obtained data revealed that, indeed, men and women differ in their sex drive when it comes to the attraction towards the representatives of both sexes. In particular, the reviewed literature indicated that women show sex drive of equal intensity when they see an attractive man as much as an attractive woman; in other words, women have more bisexual nature than their counterparts man whose sex drive to either same-sex partner or the opposite sex partner was unwavering. Understanding of this issue was important in forming the basis of the study.

The author of the article provided a strong argument concerning the existence of differences in sex drive among men and women. The article provides an
