Leaf Answers Biology If8765:

The Life of a Leaf Steven Vogel, 2012-10-17 In its essence science is a way of looking at and thinking about the world In The Life of a Leaf Steven Vogel illuminates this approach using the humble leaf as a model Whether plant or person every organism must contend with its immediate physical environment a world that both limits what organisms can do and offers innumerable opportunities for evolving fascinating ways of challenging those limits Here Vogel explains these interactions examining through the example of the leaf the extraordinary designs that enable life to adapt to its physical world In Vogel's account the leaf serves as a biological everyman an ordinary and ubiquitous living thing that nonetheless speaks volumes about our environment as well as its own Thus in exploring the leaf's world Vogel simultaneously explores our own A companion website with demonstrations and teaching tools can be found here <http://www.press.uchicago.edu/sites/vogel/index.html>

Nature's Fabric David Lee, 2017-09-28 Leaves are all around us in backyards cascading from window boxes even emerging from small cracks in city sidewalks given the slightest glint of sunlight Perhaps because they are everywhere it's easy to overlook the humble leaf but a close look at them provides one of the most enjoyable ways to connect with the natural world A lush incredibly informative tribute to the leaf Nature's Fabric offers an introduction to the science of leaves weaving biology and chemistry with the history of the deep connection we feel with all things growing and green Leaves come in a staggering variety of textures and shapes they can be smooth or rough their edges smooth lobed or with tiny teeth They have adapted to their environments in remarkable often stunningly beautiful ways from the leaves of carnivorous plants which have tiny trigger hairs that signal the trap to close to the impressive defense strategies some leaves have evolved to reduce their consumption Recent studies suggest for example that some plants can detect chewing vibrations and mobilize potent chemical defenses In many cases we've learned from the extraordinary adaptations of leaves such as the invention of new self-cleaning surfaces inspired by the slippery coating found on leaves But we owe much more to leaves and Lee also calls our attention back to the fact that that our very lives and the lives of all on the planet depend on them Not only is foliage the ultimate source of food for every living thing on land its capacity to cycle carbon dioxide and oxygen can be considered among evolution's most important achievements and one that is critical in mitigating global climate change Taking readers through major topics like these while not losing sight of the small wonders of nature we see every day if you'd like to identify a favorite leaf Lee's glossary of leaf characteristics means you won't be left out on a limb Nature's Fabric is eminently readable and full of intriguing research sure to enhance your appreciation for these extraordinary green machines
