*Robustness of the Estimates of the Hybrid New Keynesian Phillips Curve* Jordi Galí, Mark Gertler, J. David López-Salido, 2005 Gal and Gertler 1999 developed a hybrid variant of the New Keynesian Phillips curve that relates inflation to real marginal cost expected future inflation and lagged inflation GMM estimates of the model suggest that forward looking behavior is dominant The coefficient on expected future inflation substantially exceeds the coefficient on lagged inflation While the latter differs significantly from zero it is quantitatively modest Several authors have suggested that our results are the product of specification bias or suspect estimation methods Here we show that these claims are incorrect and that our results are robust to a variety of estimation procedures including GMM estimation of the closed form and nonlinear instrumental variables Also as we discuss many others have obtained very similar results to ours using a systems approach including FIML techniques Hence the conclusions of GG and others regarding the importance of forward looking behavior remain robust *Who's who in Finance and Business*, 2008 *Principles of Economics* N.
