Natural Sciences Exemplar Of 2014 Nov:

Experimental Philosophy and the Origins of Empiricism Peter R. Anstey, Alberto Vanzo, 2023-02-23 The emergence of experimental philosophy was one of the most significant developments in the early modern period. However, it is often overlooked in modern scholarship despite being associated with leading figures such as Francis Bacon, Robert Boyle, Isaac Newton, Jean Le Rond d'Alembert, David Hume, and Christian Wolff. Ranging from the early Royal Society of London in the seventeenth century to the uptake of experimental philosophy in Paris and Berlin in the eighteenth century, this book provides new terms of reference for understanding early modern philosophy and science and its eventual eclipse in the shadow of post-Kantian notions of empiricism and rationalism. **Experimental Philosophy and the Origins of Empiricism** is an integrated history of early modern experimental philosophy which challenges the rationalism and empiricism historiography that has dominated Anglophone history of philosophy for more than a century.

Times of History, Times of Nature Anders Ekström, Staffan Bergwik, 2022-02-11 As climate change becomes an increasingly important part of public discourse, the relationship between time in nature and history is changing. Nature can no longer be considered a slow and immobile background to human history, and the future can no longer be viewed as open and detached from the past. **Times of History, Times of Nature** engages with this historical shift in temporal sensibilities through a combination of detailed case studies and synthesizing efforts. Focusing on the history of knowledge, media theory, and environmental humanities, this volume explores the rich and nuanced notions of time and temporality that have emerged in response to climate change.

A Companion to Global Environmental History J. R. McNeill, Erin Stewart Mauldin, 2025-02-06 **A COMPANION TO GLOBAL ENVIRONMENTAL HISTORY** Equips both specialists and newcomers with the historical intellectual and political context for engagement with the environment. Providing multiple points of entry into a dynamic, fast-growing field, **A Companion to Global Environmental History** explores the many contours of the relationship between human societies and the natural world on which they depend. Bringing together essays by an international roster of both established experts and emerging scholars, this volume covers a uniquely broad range of temporal, geographic, thematic, and contextual approaches to the practice of global environmental history. Thirty-three detailed chapters describe how the relationship between society and nature has changed over time, examine the various drivers of change, and environmental transformations. Survey different types of environmental thought and action around the world, and more. Now in its second edition, the Companion is fully revised to reflect major research developments and new trajectories within the field. Updated chapters that present new evidence for longstanding debates and innovative applications of environmental history are accompanied by six entirely new chapters on India, China, Africa, early modern cities, global environmental governance, and European environmentalism. Offering fresh insights into environmental thought, culture, policy, and politics, **A Companion to Global Environmental History, Second Edition** is an ideal textbook for undergraduate and graduate students and an invaluable reference for scholars, researchers, and environmental

historians Relics Jamie Grove,Max Grove,Mini Museum,2021-10-26 Four billion years in the palm of your hand Relics A History of the World Told in 133 Objects is the story of our planet as you ve never seen it before The Mini Museum is a collection of treasures gathered from across space and time shared by tens of thousands of people in more than 120 countries Each item in the collection is a story connected to a childhood dream of sharing all the wonders the universe has to offer while bringing all of us closer together In this book the Mini Museum team shares the stories of real objects that have shaped our very existence across billions of years of history Beginning with the birth of our solar system and the very building blocks of life you ll explore our dynamic planet from the constant shifting of continents to dramatic and violent upheavals which have changed the course of all life again and again You ll visit mighty civilizations with cultures spanning millennia as well as modern symbols of creativity and innovation and the march of humanity as we reach toward the stars Every item is photographed and presented in detail There are also wild tales of adventure as the crew travels the world and prepares one of the most complex collections ever assembled Bulletin of the American Museum of Natural History Joel Asaph Allen,2022 Comprises articles on geology paleontology mammalogy ornithology entomology and anthropology

Handbook of Community Movements and Local Organizations in the 21st Century Ram A. Cnaan,Carl Milofsky,2018-05-22 This new handbook builds on The Handbook of Community Movements and Local Organizations published in 2007 and is the only resource defining the field of study related to small nonprofit organizations and to studying communities from the standpoint of associations that make up communities It explores the history and conceptualizations of community theoretical concepts in community organizations social movements ranging from health to crime and community practice methods Further it provides authoritative statements of major theory areas gives examples of different sub areas of the field provides guidance to people working as practitioners in the field and nicely coincides with the increasing interest in clinical sociology This handbook is of great interest to academics students and practitioners with an interdisciplinary resource to understand and collaborate in work with contemporary communities **Annals of the Carnegie Museum**

Farlow,2018-10-08 How can the tracks of dinosaurs best be interpreted and used to reconstruct them In many Mesozoic sedimentary rock formations fossilized footprints of bipedal three toed tridactyl dinosaurs are preserved in huge numbers often with few or no skeletons Such tracks sometimes provide the only clues to the former presence of dinosaurs but their interpretation can be challenging How different in size and shape can footprints be and yet have been made by the same kind of dinosaur How similar can they be and yet have been made by different kinds of dinosaurs To what extent can tridactyl dinosaur footprints serve as proxies for the biodiversity of their makers Profusely illustrated and meticulously researched

Noah's Ravens quantitatively explores a variety of approaches to interpreting the tracks carefully examining within species and across species variability in foot and footprint shape in nonavian dinosaurs and their close living relatives. The results help decipher one of the world's most important assemblages of fossil dinosaur tracks found in sedimentary rocks deposited in ancient rift valleys of eastern North America. Those often beautifully preserved tracks were among the first studied by paleontologists and they were initially interpreted as having been made by big birds, one of which was jokingly identified as Noah's legendary raven.
