Optical Techniques in Regenerative Medicine Stephen P. Morgan, Felicity R. Rose, Stephen J. Matcher, 2013-08-08 In regenerative medicine tissue engineers largely rely on destructive and time consuming techniques that do not allow in situ and spatial monitoring of tissue growth Furthermore once the therapy is implanted in the patient clinicians are often unable to monitor what is happening in the body To tackle these barriers optical techniques have been developed to image and characterize many tissue properties fabricate tissue engineering scaffolds and characterize the properties of the scaffolds Optical Techniques in Regenerative Medicine illustrates how to use optical imaging techniques and instrumentation for the fabrication assessment and longitudinal monitoring of regenerative medicine therapies The book covers optical coherence tomography acousto optic imaging Raman spectroscopy machine vision bioluminescence second harmonic generation microscopy multi photon microscopy coherent anti Stokes Raman scattering fluorescence spectroscopy and light scattering spectroscopy Each chapter provides an overview of a particular technique its advantages and limitations in terms of structural and functional information and examples of applications in regenerative medicine The future evolution of regenerative medicine from academic research to viable clinical alternatives to conventional treatments is dependent on the development of non destructive analytical techniques that can elucidate the stages of tissue development both in vitro and in vivo as well as track the fate of cells following injection This practical book demonstrates the vital role of optical techniques in the dynamic field of regenerative medicine It guides regenerative medicine researchers toward finding the most appropriate technique for their applications and helps biophotonics researchers see where their technologies can be applied

Handbook of Tissue Optical Clearing Valery V. Tuchin,Dan Zhu,Elina A. Genina,2022-02-08 Biomedical photonics is currently one of the fastest growing fields connecting research in physics optics and electrical engineering coupled with medical and biological applications It allows for the structural and functional analysis of tissues and cells with resolution and contrast unattainable by any other methods However the major challenges of many biophotonics techniques are associated with the need to enhance imaging resolution even further to the sub cellular level as well as translate them for in vivo studies The tissue optical clearing method uses immersion of tissues into optical clearing agents OCAs that reduces the scattering of tissue and makes tissue more transparent and this method has been successfully used ever since This book is a self contained introduction to tissue optical clearing including the basic principles and in vitro biological applications from in vitro to in vivo tissue optical clearing methods and combination of tissue optical clearing and various optical imaging for diagnosis The chapters cover a wide range of issues related to the field of tissue optical clearing mechanisms of tissue optical clearing in vitro and in vivo traditional and innovative optical clearing agents recent achievements in optical clearing of different tissues including pathological tissues and blood for optical imaging diagnosis and therapy This book provides a comprehensive account of the latest research and possibilities of utilising optical clearing as an instrument for improving the diagnostic effectiveness of modern optical diagnostic methods The book is addressed to biophysicist researchers graduate students and postdocs of biomedical specialties as well as biomedical engineers and physicians interested in the development and application of optical methods in medicine Key features The first collective reference to collate all known knowledge on this
