Journal Of Environmental Polymer Degradation Impact Factor:

Journal of Environmental Polymer Degradation ,1998 *Waste Management and the Environment* X J. Casares,H. Itoh,M. Lega,2020-08-25 Waste Management is one of the key problems of modern society due to the ever expanding volume and complexity of discarded domestic and industrial waste Society is increasingly aware of the need to establish better practices and safer solutions for waste disposal This requires further investigation into disposal methods and recycling as well as new technologies to monitor landfills industrial mining wastes and chemical and nuclear repositories This creates a need for more research on current disposal methods such as landfills incineration chemical and effluent treatment as well as recycling clean technologies waste monitoring public and corporate awareness and general education Unfortunately many of the policies adopted in the past were aimed at short term solutions without due regard to the long term implications on health and the environment leading in many cases to the need to take difficult and expensive remedial action The desired direction of Waste Management is towards sustainable strategies The approach which has emerged as the most promising has been called 4Rs where reduction reuse recycling and recovery are seen as the best actions This largely decreases the volume of waste that needs final disposal Recovery refers to the establishment of two new classifications those of Secondary Raw Materials SRM and of Refuse Derived Fuel RDF They both relate to useful products obtained from waste and make a shift from the mere recycle or reuse mostly seen as a way to reduce dumping to the valuable employment of such matter within the production cycle Another aspect of this revolution is happening subtly and gradually by people buying waste particularly eWaste and some types of plastic the so called technical waste This is happening due to the strong demand and high price of certain new materials and the possibility of sorting out waste in developing regions of the world As a result a market in Secondary Raw Materials SRM has developed Covering various areas under the topic of Waste management this volume contains a selection of papers presented at the 10th International Conference on Waste Management and the Environment **Remediation Technologies for Microplastics in Aquatic Environments** Mukarram Zubair,Muhammad Daud,Lucas Meili,2025-11-19 Remediation Technologies for Microplastics in Aquatic Environments examines up to date technological innovations and their applications for the mitigation of Microplastics Pollution MP With a strong focus on the governing factors influencing the performance of remediation techniques encircling microplastic characteristics reactor design and process parameters this comprehensive guide presents necessary information on current remediation technologies designed for the removal of MPs from water bodies and comprehensively addresses the fate and impact of microplastics in the environment The book is divided into three sections 1 Microplastic pollution sources regulation and analysis 2 Microplastic Mitigation Technologies and Applications and 3 Microplastic environmental impacts toxicology and risk The meticulous use of detailed case studies the diverse list of experts in the field and the clear structure of the book equip the reader with tools for implementing sustainable and effective solutions crucial for the treatment of water and

contaminated wastewater making this book a valuable resource for students and researchers learning about successful strategies for microplastics removal Includes case studies using the latest innovations and applications for addressing microplastics pollution MP Encompasses various strategies for the remediation and control of MPs including bioremediation adsorption membrane technologies and nanotechnology Offers comprehensive coverage of the environmental impact of MPs and presents sustainable solutions to mitigate their effects *Insights In Biomaterials 2022 / 2023 - Novel Developments, Current Challenges, and Future Perspectives* Hasan Uludag,Yunbing Wang,Nihal Engin Vrana,Candan Tamerler,Chandra Kothapalli,Milana C. Vasudev,2024-03-04 **Green Polymeric Nanocomposites** Satya Eswari Jujjavarapu,Krishna Mohan Poluri,2020-01-28 Covering fundamentals through applications this book discusses environmentally friendly polymer nanocomposites and alternatives to traditional nanocomposites through detailed reviews of a variety of materials procured from different resources their synthesis and applications using alternative green approaches The text Describes green polymeric nanocomposites that show greater properties in terms of degradability biocompatibility synthesis process cost effectiveness mechanical strength high surface area nontoxicity and environmental friendliness Explains the basics of eco friendly polymer nanocomposites from different natural resources and their chemistry Discusses practical applications that present future directions in the biomedical pharmaceutical and automotive industries This book is aimed at scientists researchers and academics working in nanotechnology biomaterials polymer science and those studying products derived from eco friendly nanomaterials **Handbook of Biodegradable Materials** Gomaa A. M. Ali,Abdel Salam H. Makhoulf,2023-02-20 This Handbook discusses the recent advances in biodegradation technologies and highlights emerging sustainable materials including environmentally friendly nano based materials for replacing plastics It is useful to scientists engineers biologists medical doctors and provides alternative eco friendly materials to replace the currently used ones with harmful impact on the environment and life The chapters present different types of alternative materials in diverse areas such as food packaging materials materials for construction and agricultural materials The principles and types of biodegradation technologies are described in depth *Biodegradability of Conventional Plastics* Anjana Sarkar,Bhasha Sharma,Shashank Shekhar,2022-09-13 Biodegradability of Conventional Plastics Opportunities Challenges and Misconceptions brings together innovative research on the biodegradability of conventional plastics providing an extensive overview of approaches and strategies that may be implemented while also highlighting other methods for alleviating the eventual environmental impact of plastics The book begins by providing a lifecycle assessment of plastics the environmental impact of plastic waste and the factors that affect the biodegradability of plastics The different categories and terminologies surrounding bio based plastics and biodegradable plastics are then defined and explained in detail as are the issues surrounding bioplastics Other sections discuss biodegradability approaches for enhanced biodegradability of various major types of plastics including polyolefins polyethylene terephthalate PET polystyrene poly vinyl chloride automotive plastics and

composites and agricultural plastic waste The final part of the book focuses on further techniques and emerging areas including the utilization of chemical additives nanomaterials the role of microbes in terms of microbial degradation and microbial attaching revalorization of plastic waste through industrial biotechnology and future opportunities and challenges Explains the fundamentals of plastic waste lifecycle assessment and factors that influence the biodegradability of plastics Provides novel techniques for improved biodegradability exploring areas such as pre treatment chemical additives nanomaterials and microbial degradation Addresses current challenges and limitations in relation to bio based and biodegradable plastics microplastics and nanoplastics from bioplastics and plastic waste **Solid Waste Management**
