rethink how and where young children learn best by taking the child's eye view of the learning environment To a four year old watching bulldozers at a construction site or chasing butterflies in flight the world is awash with promise Little children come into the world hardwired to learn in virtually any setting and about any matter Yet in today's preschool and kindergarten classrooms learning has been reduced to scripted lessons and suspect metrics that too often undervalue a child s intelligence while overtaxing the child's growing brain These mismatched expectations wreak havoc on the family parents fear that if they choose the wrong program their child won t get into the right college But Yale early childhood expert Erika Christakis says our fears are wildly misplaced Our anxiety about preparing and safeguarding our children's future seems to have reached a fever pitch at a time when ironically science gives us more certainty than ever before that young children are exceptionally strong thinkers In her pathbreaking book Christakis explains what it s like to be a young child in America today in a world designed by and for adults where we have confused schooling with learning She offers real life solutions to real life issues with nuance and direction that takes us far beyond the usual prescriptions for fewer tests more play She looks at children's use of language their artistic expressions the way their imaginations grow and how they build deep emotional bonds to stretch the boundaries of their small worlds Rather than clutter their worlds with more and more stuff sometimes the wisest course for us is to learn how to get out of their way Christakis's message is energizing and reassuring young children are inherently powerful and they and their parents will flourish when we learn new ways of restoring the vital early learning environment to one that is best suited to the littlest learners This bold and pragmatic challenge to the conventional wisdom peels back the mystery of childhood revealing a place that s rich with possibility Magic Lantern Art Terry Borton, 2026-01-02 Magic Lantern Art celebrates the life and artistry of cinema pioneer Joseph Boggs Beale 1841 1926 Beale was America's premier artist creating images for magic lantern shows the projected performances that gave birth to the movies His 2 000 lantern illustrations were made into story telling slides that were seen and admired by millions a year Almost single handedly he created American screen entertainment for the generation before the movies pioneering narrative techniques that later appeared on the nation s cinema screens Magic Lantern Art is based on both the author s extensive Beale archive now held by the Lucas Museum of Narrative Art in Los Angeles and on his 25 year career performing more than 1 000 professional lantern shows using Beale's slides Written in an engaging and accessible style and featuring over 500 color pictures the book is a must read for anyone interested in cinema history or American art Practical Farmer ,1871
