

2-6 MAINTENANCE

sure the cooling indicator stream is visible at all times. Make periodic checks, including one final check before the motor is shut down each time. If a cooling indicator stream is not present at any point, troubleshoot the problem before further engine operation.

9. If equipped, check the power steering belt and fluid level. A quick visual inspection of the power steering belt and fluid level at the end of each day will warn of problems that should be fixed before the next launch.

10. If used in salt, brackish or polluted waters thoroughly rinse the engine (and hull), then flush the cooling system according to the procedure in this section.

■ Even if used in fresh water, it is never a bad idea to flush the system with fresh clean water from a garden hose. Keep in mind that sand, silt or other debris may be picked up by the cooling system during normal motor operation. Removing this debris before it can build-up and clog the engine is wise service.

LUBRICATION SERVICE

An outboard motor's greatest enemy is corrosion. Face it, oil and water just don't mix and, as anyone who has visited a junkyard knows, metal and water aren't the greatest of friends either. To expose an engine to a harsh marine environment of water and wind is to expect that these elements will take their toll over time. But, there is a way to fight back and help prevent the natural process of corrosion that will destroy your beloved boat motor.

Various marine grade lubricants are available that serve two important functions in preserving your motor. Lubricants reduce friction on metal-to-metal contact surfaces and, they also displace air and moisture, therefore slowing or preventing corrosion damage. Periodic lubrication services are your best method of preserving an outboard motor.

Lubrication takes place through various forms. For all engines, internal moving parts are lubricated by 2-stroke engine oil, through oil contained in the fuel/oil mixture. Pay close attention to the oil level in the tank on oil injected models, or to the oil/fuel mixing process on pre-mix motors. Also, the lower unit is filled with gear oil that lubricates the driveshaft, propshaft, gears and other internal gearbox components. The gear oil should be periodically checked and replaced following the appropriate Engine Maintenance procedures. Perform services based on time or engine use, as outlined in the Maintenance Intervals chart at the end of this section.

11. Inspect all anodes after each use for signs of wear, damage or to make sure they just plain didn't fall off (especially if you weren't careful about checking all the accessible fasteners the last time you launched).

12. On FICHT Fuel Injection (FFI) models, be sure to shut the battery switch off if the engine is not going to be run for a couple of weeks or more. The Engine Management Module (EMM) on FFI motors covered will continue to draw a small amount of current from the battery, even when the motor is shut off, in order to prevent a slow drain of the entire battery. Either periodically recharge the battery, or isolate it by disconnecting the cables or shutting off the battery switch when the boat is dockside or on the trailer.

13. For Pete's sake, make sure the plug is in! We shouldn't have to say it, but unfortunately we do. If you've been boating for any length of time, you've seen or heard of someone whose backside is trailer down a launch ramp, forgetting to check the transom drain plug before literally submerging the boat. Always make sure the transom plug is installed and tight before a launch.

Fig. 6 Always make sure the transom plug is installed and tightened securely before a launch

⚠ WARNING

If equipped with power trim/tilt, maintaining proper fluid level is necessary for the built-in impact protection system. Incorrect fluid level could lead to significant lower unit damage in the event of an impact.

On motors equipped with power trim/tilt, the fluid level and condition in the reservoir should be checked periodically to ensure proper operation. Also, on these motors, correct fluid level is necessary to ensure operation of the motor impact protection system.

Most other forms of lubrication occur through the application of grease (Evinrude/Johnson Triple Guard, Evinrude/Johnson EP/Wheel bearing grease, Evinrude/Johnson Starter Pinion Lube, or their equivalents) to various points on the motor. These lubricants are either applied by hand (an old toothbrush can be helpful in preventing a mess) or using a grease gun to pump the lubricant into grease fittings (also known as zerk fittings). When using a grease gun, do not pump excessive amounts of grease into the fitting. Unless otherwise directed, pump until either the rubber seal (if used) begins to expand or until the grease just begins to seep from the joints of the component being lubricated (if no seal is used).
