Introduction to Joomla!

Introduction

Joomla is one of the most popular, free and open-source content management systems (CMS) available for publishing web content. It is user friendly, extendable, multilingual, accessible, responsive, search engine optimised and so much more. Joomla! 4 is the current version, released in August 2021.

There are thousands of free and commercial Joomla! Extensions available from third parties for all sorts of special purposes. However, Joomla comes with enough core Extensions to allow you to create a fully functional website out of the box in a few minutes. It is best to familiarise yourself with the core Joomla capabilities before looking for third party Extensions.

Joomla must be installed on a web server, either on a hosting service to make your content available to the rest of the world or on your own laptop or desktop computer for private testing purposes.

Joomla! Architecture

A Joomla! installation consists of the files used to manage and display content and a database where most of the content is stored. There are separate interfaces for the public Site and for the site Administrator, although many administrator functions can be accomplished with the site interface. The interface appearance is generated by a set of files collectively known as a template.

you can always ask questions when you don't understand something or they are not clear enough. The only condition to embed the videos and files is that they have to be online. Upload your videos on YouTube or Vimeo for example and upload your files. The documents can be Portable Document Format (PDFs), Word docs, Power Point, Spreadsheets, and any other documents recognized by Google Docs on your server or Google servers and embed them into your sites. The path of the document does not have to be some on docs.google.com but that works fine; it works as well if they are on any other website but you have to enter the full path of the file. You can define, configure, and embed any number of jQuery images sliders into your site. You can define and use any number of Popups on your Joomla site. You can embed Google maps and directions into your site. You can define and configure file packages; they can contain any number of files the visitors can download for free or for money. PayPal payment is included. You can define, configure, and embed Community Builder advanced searches. This component works with any CB version. Since JEmbedAll version 1.3, the search results can open in the same window, in a different window, or in a modal window. Beyond that, you can give every user several powerful tools: they can save the search forms and search results, they can embed that saved search results as users lists, they can use CB privacy, a tool that restricts access to some fields or even the users on searches. You can embed Facebook pages, posts, videos, and images depending on the Facebook privacy; in many cases, all this has to be public for everyone to see, but you can also embed some plugins: Facebook activity, comments, facepile, likebox, and recommendations. Starting with the 1.5 version, you can generate and download e-books based on your website content. The PayPal payment was modified and extended; you can create shopping carts for files you want to sell, and the generated e-books.
