Journal Decision Making:

Primer on Decision Making James G. March, 1994-05-23 Building on lecture notes from his acclaimed course at Stanford University James March provides a brilliant introduction to decision making a central human activity fundamental to individual group organizational and societal life March draws on research from all the disciplines of social and behavioral science to show decision making in its broadest context By emphasizing how decisions are actually made as opposed to how they should be made he enables those involved in the process to understand it both as observers and as participants March sheds new light on the decision making process by delineating four deep issues that persistently divide students of decision making Are decisions based on rational choices involving preferences and expected consequences or on rules that are appropriate to the identity of the decision maker and the situation Is decision making a consistent clear process or one characterized by ambiguity and inconsistency Is decision making significant primarily for its outcomes or for the individual and social meanings it creates and sustains And finally are the outcomes of decision processes attributable solely to the actions of individuals or to the combined influence of interacting individuals organizations and societies March's observations on how intelligence is or is not achieved through decision making and possibilities for enhancing decision intelligence are also provided March explains key concepts of vital importance to students of decision making and decision makers such as limited rationality history dependent rules and ambiguity and weaves these ideas into a full depiction of decision making He includes a discussion of the modern aspects of several classic issues underlying these concepts such as the relation between reason and ignorance intentionality and fate and meaning and interpretation This valuable textbook by one of the seminal figures in the history of organizational decision making will be required reading for a new generation of scholars managers and other decision makers

nature of decision making Judgment and Decision Making at Work Scott Highhouse, Reeshad S. Dalal, Eduardo Salas, 2013-09-05 Employees are constantly making decisions and judgments that have the potential to affect themselves their families their work organizations and on some occasion even the broader societies in which they live A few examples include deciding which job applicant to hire setting a production goal judging one's level of job satisfaction deciding to steal from the cash register agreeing to help organize the company's holiday party forecasting corporate tax rates two years later deciding to report a coworker for sexual harassment and predicting the level of risk inherent in a new business venture In other words a great many topics of interest to organizational researchers ultimately reduce to decisions made by employees Yet numerous entreaties notwithstanding industrial and organizational psychologists typically have not incorporated a judgment and decision making perspective in their research The current book begins to remedy the situation by facilitating cross pollination between the disciplines of organizational psychology and decision making The book describes both laboratory and more naturalistic field research on judgment and decision making and applies it to core topics of interest to industrial and organizational psychologists performance appraisal employee selection individual differences goals leadership teams and stress among others The book also suggests ways in which industrial and organizational psychology research can benefit the discipline of judgment and decision making The authors of the chapters in this book conduct research at the intersection of organizational psychology and decision making and consequently are uniquely positioned to bridging the divide between the two disciplines *Decision Management* J. Frank Yates, 2003-02-03 Why do the people in some companies continually dazzle us with their brilliant decisions while those in others make one blunder after another Do they understand their businesses better Are they just plain smarter Or is it all a matter of luck The answer says J Frank Yates is none of the above The real key rarely recognized is how the leaders manage the company's decision processes the leaders decision management practices Drawing on his thirty years of research and experience as well as scholarship from psychology economics statistics strategy medicine and other fields to explain the fundamental nature of business decision problems Yates highlights the ten cardinal decision issues crucial to managing the decision making process and ultimately better company decisions He covers problems ranging from recognizing whether a decision is actually called for to assuring that a preferred course of action will be implemented He shows how solid decisions result when managers ensure that deciders resolve every cardinal issue effectively for every decision problem facing the company He also reveals how conversely chronically poor decisions are traceable to managers allowing or even creating conditions that encourage deciders to fall short in how they address at least one of those critical issues The Next Right Thing Guided Journal Emily P.
