Routledge Handbook of Sports Coaching Paul Potrac,Wade Gilbert,Jim Denison,2013-03-05 Over the last three decades sports coaching has evolved from a set of customary practices based largely on tradition and routine into a sophisticated reflective and multi disciplinary profession In parallel with this coach education and coaching studies within higher education have developed into a coherent and substantial field of scholarly enquiry with a rich and sophisticated research literature The Routledge Handbook of Sports Coaching is the first book to survey the full depth and breadth of contemporary coaching studies mapping the existing disciplinary territory and opening up important new areas of research

Bringing together many of the world's leading coaching scholars and practitioners working across the full range of psychological, social, and pedagogical perspectives, the book helps to develop an understanding of sports coaching that reflects its complex, dynamic, and messy reality. With more importance than ever before being attached to the role of the coach in developing and shaping the sporting experience for participants at all levels of sport, this book makes an important contribution to the professionalization of coaching and the development of coaching theory. It is important reading for all students, researchers, and policy makers with an interest in this young and flourishing area. **Human 4.0** Yves

Rybarczyk, 2021-01-07 Information technology is becoming ingrained in our everyday life. The consequence of this is that the line between humans and technology is more and more blurred and tends to transform the human being into a cyber organism. This transformation, accompanied by the emergence of Industry 4.0, brings us to define a new term: Human 4.0. This new generation of individuals has to deal with smart, interconnected, pervasive environments supported by the Internet of Things. Nevertheless, this merge between humans and technology is not straightforward and requires an additional effort to reduce the gap between the human being and the machine. Such research implies a multidisciplinary approach to the interaction between biological organisms and artificial artefacts. This book intends to provide the reader with an insight into the new relationship with the technology brought about by Industry 4.0 and how it can make the human-machine interaction more efficient.
