between adverse psychosocial working conditions and harmful health behaviors along with interventions aimed at improving the work environment and maximizing effectiveness. Additionally, the book discusses how scientists and practitioners in OHP conduct research and other important concerns such as workplace violence, work-life balance, and safety. The book reinforces learning with chapter objectives, highlight boxes containing intriguing examples of research, and current controversies and chapter summaries.

Longitudinal Research in Occupational Health Psychology Toon Taris, 2017-10-02 Occupational health psychology (OHP) involves the application of psychology to improving the quality of work life and to promoting and protecting the safety, health, and well-being of employees. Achieving these aims requires researchers and practitioners to possess in-depth knowledge of the processes that are presumed to bring about the desired outcomes. To date, most studies in OHP have relied on cross-sectional designs in examining these processes. In such designs, all variables of interest are measured simultaneously. Although this has generated useful insights in how particular phenomena are associated, such designs cannot be trusted when it comes to drawing causal inferences; association is not causation. This book therefore focuses on longitudinal research designs in OHP whereby the concepts of interest are measured several times, offering much stronger evidence for causal relationships. The authors focus on design issues in longitudinal research, such as the number of measurements chosen and the length of the time lags between these measurements, and illustrate these issues in the context of applied research on topics such as the work-family interface, conflict at work, and employee well-being. By doing so, this volume provides a state-of-the-art overview of current research in OHP, both in terms of its findings and methodologies. This book is based on a special issue of the journal *Work Stress*.

Research Methods in Occupational Health Psychology Robert R. Sinclair, Mo Wang, Lois E. Tetrick, 2012 *Research Methods in Occupational Health Psychology: Measurement, Design, and Data Analysis* provides a state-of-the-art review of current issues and best practices in the science of Occupational Health Psychology. Occupational Health Psychology (OHP) is a multidisciplinary and rapidly growing area of research, and it is difficult or impossible for researchers to keep up with developments in all of the fields where scholars conduct OHP science. This book will help OHP scholars improve their own research by translating recent innovations in methodology into sets of concrete recommendations that will help scholars improve their own research as well as their training of future researchers.
