Journal of optimization theory and applications [Anonymus AC09591845],1967 **Evolutionary and Memetic Computing for Project Portfolio Selection and Scheduling** Kyle Robert Harrison,Saber Elsayed,Ivan Leonidovich Garanovich,Terence Weir,Sharon G. Boswell,Ruhul Amin Sarker,2021-11-13 This book consists of eight chapters authored by distinguished researchers and practitioners that highlight the state of the art and recent trends in addressing the project portfolio selection and scheduling problem PPSSP across a variety of domains particularly defense social programs supply chains and finance Many organizations face the challenge of selecting and scheduling a subset of available projects subject to various resource and operational constraints In the simplest scenario the primary objective for an organization is to maximize the value added through funding and implementing a portfolio of projects subject to the available budget However there are other major difficulties that are often associated with this problem such as qualitative project benefits multiple conflicting objectives complex project interdependencies workforce and manufacturing constraints and deep uncertainty regarding project costs benefits and completion times It is well known that the PPSSP is an NP hard problem and thus there is no known polynomial time algorithm for this problem Despite the complexity associated with solving the PPSSP many traditional approaches to this problem make use of exact solvers While exact solvers provide definitive optimal solutions they quickly become prohibitively expensive in terms of computation time when the problem size is increased In contrast evolutionary and memetic computing afford the capability for autonomous heuristic approaches and expert knowledge to be combined and thereby provide an efficient means for high quality approximation solutions to be attained As such these approaches can provide near real time decision support information for portfolio design that can be used to augment and improve existing human centric strategic decision making processes This edited book provides the reader with a broad overview of the PPSSP its associated challenges and approaches to addressing the problem using evolutionary and memetic computing **One Hundred Years of Sci-Tech Libraries** Ellis Mount,2020-06-04 This book first published in 1988 celebrates the development of sci tech libraries in honour of the one hundredth anniversary of the founding of the first library school in the United States The expert contributors provide a survey of the development of sci tech libraries as well as some thoughts about their future This comprehensive volume covers several types of sci tech libraries information retrieval and library education Library professionals will be fascinated but the journey of progress detailed in these well written chapters Alternative Careers in Sci-tech Information Service Ellis Mount,1987 An eye opening look at alternative careers for those with a sci tech background whether they be librarians or scientists or engineers this exciting volume fills a gap in the professional literature The contributors all of whom have pursued alternative careers provide detailed accounts of their jobs including skills and education needed working environment job rewards and challenges and future prospects Although most of these positions fall outside traditional career fields information broker translator acquisitions editor information resources manager research

scientist online database manager and abstractor and indexer they offer options for professionals seeking challenging new careers

IMU, ICM, Medals, Prizes, and Laureates Ravi P. Agarwal, 2025-10-19 The book begins with the formal establishment of the International Mathematical Union IMU and its purpose of promoting international cooperation in mathematics by supporting and assisting the international Congress of Mathematicians ICM every four years The book presents the most important features of each ICM from 1897 to 2022 including the history of various medals and awards particularly the Fields Medal which is regarded as one of the highest honors a mathematician can receive and has been described as the Nobel Prize of mathematics For each Laureate the book provides their family background a short description of the work that led to the award a history of academic jobs research conducted after receiving the award and a list of further honors and awards This book will stimulate all mathematicians especially students who think that mathematics is less rewarding compared to other disciplines

Network Data Envelopment Analysis Chiang Kao, 2023-07-24 This second edition systematically presents the underlying theory model development and applications of network Data Envelopment Analysis DEA It discusses the models used to measure the efficiency of systems in specific network structures and introduces readers to the latest applications It demonstrates how the network DEA approach helps identify and manage the specific components that cause inefficiencies in the overall system The existing models for measuring the efficiency of systems in specific network structures are also discussed and the relationships between system efficiency and component efficiency are explored Moreover the book provides an advanced exposition on performance evaluation of systems with network structures It explores the networked nature of most production and operation systems and explains why network analyses are necessary Accordingly the book will inspire new research and applications based on the state of the art In this new edition the latest research advances and discoveries are discussed Two new chapters on Linkage Efficiency and External and Internal Evaluations have been added This book is mainly aimed at researchers and graduate students who are interested in performance evaluation DEA and multi criteria decision analysis Practitioners who want to measure the performance of production operation or any type of decision making units will also find it useful

Discover the Magic : Delia Owens "Where the Crawdads Sing" This evocative coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens spins a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting.

These popular novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of captivating stories waiting to be discovered.

The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a exceptional and suspenseful novel that will keep you speculating until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
