Describing Verb Valency Mário Alberto Perini, 2015-09-15 The elaboration of linguistic theories depends on the existence of adequate descriptions of particular languages otherwise theories will be poorly grounded on empirical data This book starts from theoretical points of wide acceptance among linguists and goes on to present a descriptive metalanguage able to express the facts of verb valency which constitute one of the core areas in linguistic description Most of the data come from an extensive survey under way of the valency of Portuguese verbs but the present work s relevance goes well beyond that and incorporates a proposal applicable to other European languages illustrated by the wealth of English examples included in the exposition Among the topics discussed are the syntactic component of constructions following here a proposal recently published in Culicover and Jackendoff s *Simpler Syntax* delimitation and definition of semantic roles the role of linking rules and their relation to prototypes and the connection between linguistic expressions and cognitive units such as frames and schemata The result is a notational system flexible and robust enough to describe all aspects of verb valency

Hardwood Reforestation and Restoration Daniel Gagnon, Benoit Truax, 2019-04-25 Hardwood dominated temperate forests mostly in Eastern North America Europe North East Asia provide valuable renewable timber and numerous ecosystem services Many of these forests have been subjected to harvesting or conversion to agriculture sometimes over centuries that have greatly reduced their former extent and diversity Natural regeneration following harvesting or during post agricultural succession has often failed to restore these forests adequately Past harvesting practices and the valuable timber of some species have led to a reduction in their abundance The loss of apex predators has caused herbivore populations to increase and exert intense browsing pressure on hardwood regeneration often preventing it Particularly important are fruit nut and acorn bearing species because of their vital role in forest food webs and biodiversity Restoring hardwood species to natural forests in which they were formerly more abundant will require a number of forest management actions e g resistant hybrids deer exclosures protectors enrichment planting

underplanting etc Similarly reforesting areas that were once natural forests will also require new silvicultural knowledge Global warming trends will intensify the need for interventions to maintain the diversity and function of temperate hardwood forests as well as for increase hardwood reforestation Gestión de proyectos con Project 2007 Elanie J.
