Smelting is an industrial process involving the extraction of metal from ore During this process impurities in ore including
 arsenic lead and cadmium may be released from smoke stacks contaminating air water and soil with toxic heavy metals The
 problem of public health harm from smelter emissions received little official attention for much for the twentieth century
 Though people living near smelters periodically complained that their health was impaired by both sulfur dioxide and heavy
 metals for much of the century there was strong deference to industry claims that smelter operations were a nuisance and
 not a serious threat to health It was only when the majority of children living near the El Paso Texas smelter were discovered
 to be lead exposed in the early 1970s that systematic independent investigation of exposure to heavy metals in smelting
 communities began Following El Paso an even more serious led poisoning epidemic was discovered around the Bunker Hill
 smelter in northern Idaho In Tacoma Washington a copper smelter exposed children to arsenic a carcinogenic threat
 Thoroughly grounded in extensive archival research Tainted Earth traces the rise of public health concerns about nonferrous
 smelting in the western United States focusing on three major facilities Tacoma Washington El Paso Texas and Bunker Hill
 Idaho Marianne Sullivan documents the response from community residents public health scientists the industry and the
 government to pollution from smelters as well as the long road to protecting public health and the environment Placing the
 environmental and public health aspects of smelting in historical context the book connects local incidents to national stories
 on the regulation of airborne toxic metals The nonferrous smelting industry has left a toxic legacy in the United States and
 around the world Unless these toxic metals are cleaned up they will persist in the environment and may sicken people
 children in particular for generations to come The twentieth century struggle to control smelter pollution shares many
 similarities with public health battles with such industries as tobacco and asbestos where industry supported science created
 doubt about harm and reluctant government regulators did not take decisive action to protect the public s health **Report**
