FOR THE

NATIONAL MODEL NC-98

RADIO RECEIVER

SECTION I. DESCRIPTION

1-1. GENERAL

The Model NC-98 is an excellent example of a communications-type receiver with that fine performance and rugged dependability so typical of National Company products. The NC-98 has been designed to fill the needs of many varied classes, from the Amateur and Short Wave listener to the many commercial services and civil defense groups.

Eight miniature type tubes plus rectifier are utilized in the NC-98 in a modern superheterodyne circuit with a continuous frequency coverage of 140 kilocycles to 40 megacycles. Both voice and code telegraphy reception are provided to permit world-wide coverage over the entire range. The complete frequency coverage of the NC-98 is represented on two dials, with the main Tuning dial and the Bandspread dial calibrated in megacycles. A logging scale on the Bandspread dial permits relative calibration of bandspread tuning anywhere within the range of the receiver, while clear markings on both dials, including location of the new civil defense frequencies, contribute greatly to ease of operation.

The NC-98 circuitry includes a crystal filter and an S meter to make the receiver truly efficient on today's crowded bands.

A phone jack has been installed on the rear of the NC-98 to accommodate most types of record players in use today, permitting the receiver to be used for music reproduction. Powerful, faithful audio is delivered to the output terminals, while a reproduction tone switch gives the listener his choice of crisp mobile or rich home response. The delayed automatic gain control circuit compensates for fluctuations in the strength of the received signal due to atmospheric conditions, etc., while an extremely effective automatic noise limiter circuit provides maximum suppression of most types of objectionable noise.

An accessory socket is mounted at the rear of the

receiver to accommodate auxiliary apparatus such as an FM adapter, etc.

Two edge lighted slide-rule type luminous dials add greatly to the handsome appearance of the steel cabinet enclosure making the NC-98 a distinctive addition to any room, while such feet prevent marring of furniture.

1-2. CRYSTAL FILTER

One of the outstanding features of the NC-98 Receiver is its variable selectivity made possible by the crystal filter. The crystal filter provides three degrees of selectivity which enables the operator to successfully tune in code or voice signals on crowded bands and reject strong interfering signals. The selectivity switch adjusts the crystal filter to the degree of selectivity needed and the Phasing control serves to nullify interfering signals.

1-3. S METER

An S meter mounted on the front panel greatly facilitates accurate tuning and also shows the relative strength of incoming signals. Signal input readings are indicated in S units from 1 to 9 and in decibels above 10 from 0 to 40 decibels. The meter may be adjusted in its electrical zero by means of an adjustment screw located at the rear of the chassis.

1-4. AUDIO OUTPUT

A built-in audio transformer provides audio at the Speaker terminal strip located on the rear of the receiver and will match a 3.2 ohm speaker voice coil. A National type NC-98B permanent magnet speaker is recommended for use with the NC-98. Audio is also available at the phone jack located on the front panel. The headphone lead impedance is not critical, permitting use of a wide variety of headphones. Insertion of headphones into the jack automatically silences the speaker.
