Compte rendu of the Soci t de th rapeutique Modern Mathematics Dirk De Bock,2023-03-08 The international New Math
developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as
the most historically important development in curricula of the twentieth century It attracted the attention of local and
international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels
kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill
Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor
Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter
authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a
range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in
the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of
mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In
the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching
especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in
launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by
Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final
epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links
with the general history of curriculum development especially in science education including recent globalization trends
