Medical Image Computing and Computer-Assisted Intervention -- MICCAI 2010 Tianzi Jiang, Nassir Navab, Josien P.W. Pluim, Max A. Viergever, 2010-09-21

The 13th International Conference on Medical Image Computing and Computer Assisted Intervention MICCAI 2010 was held in Beijing China from 20-24 September 2010 The venue was the China National Convention Center CNCC China's largest and newest conference center with excellent facilities and a prime location in the heart of the Olympic Green adjacent to characteristic constructions like the Bird's Nest National Stadium and the Water Cube National Aquatics Center MICCAI is the

foremost international scientific event in the field of medical image computing and computer assisted interventions The annual conference has a high scientific standard by virtue of the threshold for acceptance and accordingly MICCAI has built up a track record of attracting leading scientists engineers and clinicians from a wider range of technical and biomedical disciplines This year we received 786 submissions well in line with the previous two conferences in New York and London Three program chairs and a program committee of 31 scientists all with a recognized standing in the field of the conference were responsible for the selection of the papers The review process was set up such that each paper was considered by the three program chairs two program committee members and a minimum of three external reviewers The review process was double blind so the reviewers did not know the identity of the authors of the submission After a careful evaluation procedure in which all controversial and gray area papers were discussed individually we arrived at a total of 251 accepted papers for MICCAI 2010 of which 45 were selected for podium presentation and 206 for poster presentation The acceptance percentage 32% was in keeping with that of previous MICCAI conferences All 251 papers are included in the three MICCAI 2010 LNCS volumes

Manual of Ultrasound H. Lutz,R. Meudt,2012-12-06 Building upon scientific discoveries of past years B scan ultrasonography has become a widely accepted diagnostic procedure that has assumed particular importance in the areas of obstetrics and gynecology internal medicine and urology The early and liberal use of the method even for outpatients and in outlying hospitals is in accordance with the safety and the relatively low costs of diagnostic ultrasonography Perhaps more than in any other method however the user of diagnostic ultrasound must possess a great deal of technical expertise if the equipment is to be operated properly and the ultrasonic images interpreted correctly It is little wonder therefore that training has not entirely kept pace with the burgeoning sophistication and popularity of the technique With this in mind it is

our intention to supplement available text books and atlases with a guide that offers a basic practical survey of ultra sound techniques in the areas of internal medicine obstetrics and gyne cology Basic physical and technical principles are discussed only to the extent necessary for understanding the technical control features of ultra sound equipment A brief glossary is also provided for this purpose In the section on Special Diagnosis we have intentionally adhered to a rigid for mat consisting of Examination Technique Normal Findings Pathologic Findings Differential Diagnosis Diagnostic Applications and Potential Difficulties recognizing that some repetition would be necessary in various organ specific chapters This will enable the user to locate quickly the information that is pertinent to a specific examination procedure
