Logistics is an integral part of our everyday life. Today it influences more than ever a large number of human and economic activities. In this book, the authors try to illustrate some advanced logistics and supply chain management topics recently mentioned by academic and industrial personnel. This book has been organized in 12 chapters such that the reader can study each chapter not only independently as shown in Fig 1 but also as part of a whole. If someone wants to study the book more deeply, the suggested approach for this study is shown in Fig 2. So the readers of this book may be divided into at least two groups: 1. students in Master's courses or higher who can use this book in their courses as a whole and 2. experts who want to learn more about a new topic in logistics and supply chain management; this group may want to read a chapter about a special topic that is found in this book. In the context of global competition, the more latent topics in logistics supply chain management are fast growing. This book falls within this perspective and presents 12 chapters that well illustrate the variety and complexity of these topics. This book is organized as follows: Chapter 1 introduces logistics and supply chain management and contains some primal definitions about these two concepts, some obstacles, prerequisites and infrastructures of modernized logistics and supply chain management and global supply chain management are illustrated.

Sustainable Reverse Logistics Network Daoud Aït-Kadi, Marc Chouinard, Suzanne Marcotte, Diane Riopel, 2012-12-13. Traditional logistical chains have enabled us to respond efficiently to the needs of customers in terms of services and products. However, the returns rejected and by-products of these activities have been eliminated or ignored. Reverse logistics aims at valuing these products using a value creation network integrating recovery, processing, recycling, distribution or clean removal processes. In the context of sustainable development integrating economic, social and environmental factors, these activities raise questions concerning the design of products, processes and logistic networks. Taking these considerations into account involves significant changes that affect business models as well as consumer habits. New working methods and a long term vision are the new bases for sustainable logistic networks. The objective of this book is to supply an educational tool for engineering schools as well as a management tool for the efficient implementation of the reverse logistics function. It brings together the knowledge acquired by the scientific community. Even if reverse logistics has been the subject of several books over the past few years, very few theories have been developed and the subject is far from being exhausted. This book

proposes generic concepts and processes that can be adapted to all businesses producing goods and services and which aim to integrate reverse logistics. These processes will enable us to shed light on their complexity and to take into account all the important variables. *Proceedings of China Modern Logistics Engineering* Logistics Engineering Institution, 2014-10-11

Proceedings of China Modern Logistics Engineering covers nearly all areas of logistics engineering technology focusing on the latest findings and the following theoretical aspects: Logistics Systems and Management Research, Green Logistics and Emergency Logistics, Enterprise Logistics, Material Handling, Warehousing Technology Research, Supply Chain Management, Logistics Equipment, Logistics Packaging Technology, Third party Logistics, etc. The book will help readers to grasp the relevant aspects of the theory involved, research and development trends while also offering guidance for their work and related studies. It is intended for researchers, scholars and graduate students in logistics management, logistics engineering, transportation, business administration, E-commerce and industrial engineering. *ICIDC 2022* Zuriati Ahmad Zukarnain, Ming Jin, Ong Tze San, 2022-10-13

The 2022 International Conference on Information Economy Data Modeling and Cloud Computing ICIDC 2022 was successfully held in Qingdao, China from June 17 to 19, 2022. Under the impact of COVID-19, ICIDC 2022 was held adopting a combination of online and offline conference. During this conference, we were greatly honored to have Prof. Datuk Dr. Hj. Kasim Hj. Md. Mansur from Universiti Malaysia Sabah, Malaysia to serve as our Conference Chairman. And there were 260 individuals attending the conference. The conference agenda was composed of keynote speeches, oral presentations and online Q & A discussion. The proceedings of ICIDC 2022 cover various topics including Big Data, Finance, E-Commerce and Digital Business Modeling, Method 3D Modeling, Internet of Things, Cloud Computing Platform, etc. All the papers have been checked through rigorous review and processes to meet the requirements of publication. Data modeling allows us to obtain the dynamic change trend of various indicator data so how to use big data information to model and study the development trend of economic operation plan is of great significance. And that is exactly the purpose of this conference focusing on the application of big data in the economic field as well as conducting more profound research in combination with cloud computing. *Logistics Engineering Handbook* G. Don Taylor, 2007-12-14

Achieving state of the art excellence and attaining the cost reductions associated with outstanding logistics efforts is an obvious gain in terms of competitive edge and profitability. As logistics tools evolve in comprehensiveness and complexity and the use of these new tools becomes more pervasive, maintaining a position of leadership in logistics. **Logistics** John W.
