Research for Educational Change Jill Adler, Anna Sfard, 2016-06-17 Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice Focussing its discussion within the context of mathematics education it argues that while research generated insights can have beneficial effects on learning and teaching the question of how these effects are to be generated and sustained is far from evident The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice In the first part of the book four teams of researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics classroom In the second part each of these teams makes a specific proposal about what can be done and how so that its research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms Combining two discourses that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research

Abstract Mathematical Cognition Wolfgang Grodd, Philippe Chassy, 2016-08-09 Despite the importance of mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated

view of abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage where we seek to understand how these basics skills are used to support the acquisition and use of abstract mathematical concepts

Bounded Rationality in Decision Making Under Uncertainty: Towards Optimal Granularity Joe Lorkowski, Vladik Kreinovich, 2017-07-01 This book addresses an intriguing question are our decisions rational It explains seemingly irrational human decision making behavior by taking into account our limited ability to process information It also shows with several examples that optimization under granularity restriction leads to observed human decision making Drawing on the Nobel prize winning studies by Kahneman and Tversky researchers have found many examples of seemingly irrational decisions e g we overestimate the probability of rare events Our explanation is that since human abilities to process information are limited we operate not with the exact values of relevant quantities but with granules that contain these values We show that optimization under such granularity indeed leads to observed human behavior In particular for the first time we explain the mysterious empirical dependence of betting odds on actual probabilities This book can be recommended to all students

interested in human decision making to researchers whose work involves human decisions and to practitioners who design and employ systems involving human decision making so that they can better utilize our ability to make decisions under uncertainty
