It tells you how to determine the best place for your Wi-Fi equipment and then how to configure your base station and computer for precisely your needs. A long section explains setting up your own dynamic addressing, a common need for home networks with a mix of computers and needs. Next the book covers six ways to improve your network's coverage area and range, providing higher speeds at longer distances. Finally you find out about securing your network, both keeping intruders out and securing the data that passes over the network. Four appendices cover related issues including AirPort Express configuration, setting up a software base station using AirPort Management Utilities, and finding the right Wi-Fi adapter for an older Mac or PC.
