They find it too hard to study lessons. They cannot learn it. Sometimes they feel like nothing is difficult than Mathematics. Is it real? In fact Mathematics is an easy subject if you know how to learn it. A technique to learn Mathematics is self studying. There are a lot of strategies in doing Mathematics self learning. I am going to show you a wonderful strategy here. There are three important tools that you must know to improve your math skill: they are mastering basic concepts, choosing suitable books, and learning mathematics meaning. Mastering basic concepts is the first tool that you have to learn. We cannot understand something deeply if we have no basic concepts or our basic concepts is not completely developed. In addition, thinking can process if only there are basic concepts. Likewise, when we learn mathematics, we have to think. If we have no basic concepts, we cannot process our thinking. For example, before we learn to multiply numbers, we have to understand how to sum numbers. If we have no concepts in summing numbers, we will not understand about how to multiply numbers. How to compute 7 times 4? $4 + 4 + 4 + 4 + 4 + 4 + 4$. From the above illustration, we can conclude that the basic of multiplication is summation. Consequently, we will find it hard to understand about math lessons. In addition, it can lead us to be stressful and feeling tired. The last, we will give it up. Choosing suitable books is also a potential tool for self studying. Firstly, you have to understand what level you are in. I also want to mention that it is not the level that you learn at school but your brain level. Sometimes the level of the class does not match with students' brain levels. For example, some students study in grade 12 but their brain levels in mathematics is grade 9 or lower. So you should know yourself. There are a lot of Mathematics that you can find it at Bookshops, Amazon, etc. You should buy books from different authors because they will provide you different techniques in Mathematics. If it is not enough, you can find more on the Internet. There are a lot of great books and wonderful techniques there. The last thing is learning Mathematics meaning. Mathematics symbols are not important but the most important is its meaning. Don't read the symbol but read mathematics meaning. For example, the mathematics meaning of the symbol $1 + 2 + \dots + n + \dots + 1 + 2$ is the sum of numbers from 1 to n is equal to half of the multiple of n and n + 1. Learning Mathematics meaning helps us to understand and remember in long terms. In addition, we can apply what we have

solved in some problems Sometimes Mathematics meaning helps us to explain about life This reason leads mathematics to be a wonderful subject Moreover if we don't know about mathematics meaning we will spend a lot of times with mathematics but gain a little knowledge from it It can lead us to be tired with it *Proofs in Competition Math: Volume 1* Alexander Toller, Freya Edholm, Dennis Chen, 2019-07-04 All too often through common school mathematics students find themselves excelling in school math classes by memorizing formulas but not their applications or the motivation behind them As a consequence understanding derived in this manner is tragically based on little or no proof This is why studying proofs is paramount Proofs help us understand the nature of mathematics and show us the key to appreciating its elegance But even getting past the concern of why should this be true students often face the question of when will I ever need this in life Proofs in Competition Math aims to remedy these issues at a wide range of levels from the fundamentals of competition math all the way to the Olympiad level and beyond Don't worry if you don't know all of the math in this book there will be prerequisites for each skill level giving you a better idea of your current strengths and weaknesses and allowing you to set realistic goals as a math student So mathematical minds we set you off **Army Research and Development** ,1976 *The Big Book of Home Learning Volume 1 Getting Started* Mary Pride, 2000-09
