Engineering Tables and Data A. M. Howatson, 2012-12-06 This book brings together information which is used by engineers and needed especially by students of engineering but difficult to find in a collected form In this respect engineering perhaps because it is more often divided into separate branches has so far been less well served than the other physical sciences we hope to have in part redressed the balance The contents are designed chiefly for engineering students of all kinds in universities and colleges but they should also prove useful to practising engineers as a general reference There

was some difficulty in choosing numerical values for parts of the section Properties of Matter Information was culled from a range of sources which sometimes show an alarming lack of consistency Given a choice we have used values which are either average or more likely to be reliable The degree of tolerance required varies very widely between for example the precision to which thermodynamic proper ties of steam are known and the uncertainty in those mechanical properties of solids which depend strongly on quality and preparation The tables on pages 4 12 inclusive are reproduced from S M P Advanced Tables by permission of Cambridge University Press The tables on pages 35 and 36 are reproduced from Elementary Statistical Tables lindley and Miller h permission of Cambridge University Press The tables on pages 37 and 38 are reproduced by permission of the Biometrika Trustees Class List of the Books in the Reference Library Nottingham (England). Parent,2013-06-29 In contrast to the effortless ease with which human beings control their limbs the design of controllers for robotic manipulator arms is a detailed meticulous business Motors controlling the arms need to be started and stopped at just the right moment so that the performance demanded by the user may be achieved at the end of a complicated manoeuvre And yet the same user wishes to express the task for the robot in the simplest possible terms without reference to the minute details of control sequences that his task demands It is the design of such inter faces between man and machine that is the subject of trus volume Parent and Laurgeau develop the subject in a direct and logical order They first explain the principles of maximal effort control which not only ensure that motors are driven to provide high accuracy but also that this should be done with the least waste of energy and in the shortest possible time In this context they describe the operation of pneumatic logical devices that make rapid decisions at power levels that exceed by several orders those that can be achieved with electronic devices They achieve this whilst keeping the reader aware of the logical principles that are involved in the design of master control units the devices responsible for appropriate actions being taken as a function of time
