

**Product:** Quad4 Plus, Marsys 100 & Marsys Meters  
**Subject:** Pulse Inputs (Auxiliary Inputs)  
**Date:** 05/06/2005

### Description:

This document provides information on the wiring and calculation of Ke values for the meter's auxiliary pulse inputs.

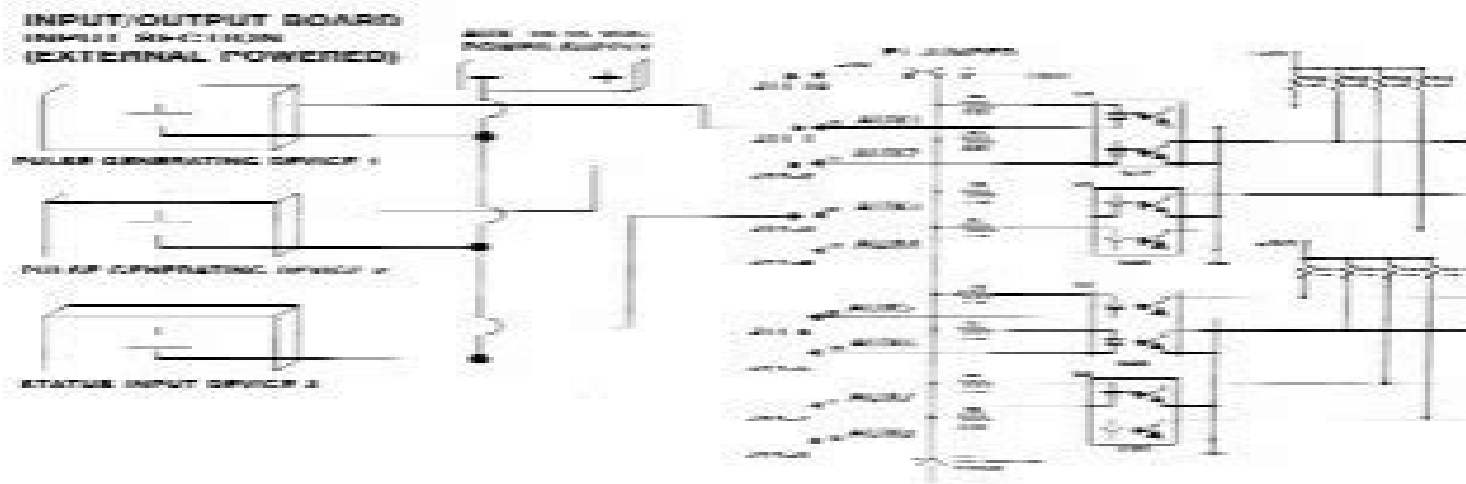

### Specifications:

The standard meter can have one auxiliary input card that can supports up to 8 form "A" pulse inputs. The inputs are two wire and are optically isolated within the meter.

### Functions:

The option card ships with jumper E1(2-3) set to power the auxiliary inputs from the internally power supply within the meter. With this jumper setting the inputs do not have to be supplied with external voltage. **HOWEVER**, this jumper defeats the optical isolation scheme. Therefore, exceeding the voltage rating of the auxiliary inputs or accidental external grounding of the circuit could cause the meter to malfunction. An alternative, is recommended that the user supply his own external power source for the auxiliary inputs. With the meter powered down move E1 to 1-2 and connect as per the following drawing.

### Wiring:
