Applied Algebra, Algebraic Algorithms and Error-Correcting Codes Gerard Cohen, Teo Mora, 1993-04-20 Researchers may find themselves confronted with proteases either because they play an essential role in a particular process they are studying or because they interfere with that process In either case they may need to investigate or inhibit the proteolytic activity Others may wish to use proteolytic enzymes as laboratory tools This book has been written with these investigators in mind and includes assay methods using natural and artificial substrates genetic based assays and strategies for the inhibition purification and crystallization of proteases In selected chapters the use of proteolytic enzymes to analyze proteins segregate cells or in peptide synthesis is covered **Shaping the Future of South Africa's Youth** Helene Perold, Nico Cloete, Joy Papier, 2012 Why solving ongoing problems with the NQF National Qualifications Framework matters The challenges unemployment imposes on youth The challenge of youth to work transitions an international perspective A statistical overview of further education and training colleges Strengthening the capacity of FET Colleges to meet the needs of young people Higher education and an expanded post school educational system Trends in training in South Africa Key issues in the assessment of South Africa's national skills development strategy Opening the doors of learning Viewing the post school education and training landscape from a youth perspective **Mathematical Theory of Scattering Resonances** Semyon Dyatlov, Maciej Zworski, 2019-09-10 Scattering resonances generalize bound states eigenvalues for systems in which energy can scatter to infinity A typical resonance has a rate of oscillation just as a bound state does and a rate of decay Although the notion is intrinsically dynamical an elegant mathematical formulation comes from considering meromorphic continuations of Green's functions The poles of these meromorphic continuations capture physical information by identifying the rate of oscillation with the real part of a pole and the rate of decay with its imaginary part An example from mathematics is given by the zeros of the Riemann zeta function they are essentially the resonances of the Laplacian on the modular surface The Riemann hypothesis then states that the decay rates for the modular surface are all either or An example from physics is given by quasi normal modes of black holes which appear in long time asymptotics of gravitational waves This book concentrates mostly on the simplest case of scattering by compactly supported potentials but provides pointers to modern literature where more general cases are studied It also presents a recent approach to the study of resonances on asymptotically hyperbolic manifolds The last two chapters are devoted to semiclassical methods in the study of resonances
