Summary questions	1 There are three states of matter. You cannot compress a substance in the solid state because the particles touch each other. In the liquid and gas states, a substance flows because the particles can move from place to place. You can compress a gas because the particles are spread out. (4 marks) 2 A substance flows in the liquid state and in the gas state. You cannot compress a substance in the liquid state but you can compress it in the gas state. In the liquid state a substance takes the shape of the bottom of its container but in the gas state a substance takes the shape of the whole container. (3 marks) 3 QWC question (6 marks). Example answers: In the solid and liquid states the particles touch their neighbours so you cannot compress water in the solid and liquid states. In the gas state the particles do not touch their neighbours so you can compress water in the gas state. In the solid state the particles are in fixed positions so the shape of a solid is fixed. In the liquid and gas states particles move from place to place so the shape in the liquid and gas states is not fixed. In the liquid and gas states water can flow.
