

Task

Answer the following momentum questions.

1. A 1 kg box is sliding across a frictionless ice rink at 5 m/s. It hits a stationary 1 kg box; the two stick together, effectively becoming one object - a "double box" - sliding across the ice.

- a. Calculate the total momentum before the collision. (Hint - work out the momentum of each box and add the momentum values together.)
- b. State the total momentum after the collision. (Hint - you don't need to do any calculations.)
- c. Calculate the total mass of the 'double box' after the collision.
- d. Rearrange the formula $p = mv$ and work out the velocity of the "double box" as it slides across the ice after the collision (Hint - use your answers from (b) and (c) for momentum and mass.)

Complete questions 2 and 3. Follow the same procedure as for Q1 (although you can take short cuts if you are confident - if you need to ask what they are, don't try!). It always helps to draw a diagram!

2. A speedboat and 5 passengers, total mass 1 500 kg, is travelling north at 4 m/s. It runs into a fishing boat, mass 2 000 kg, which is at anchor (stationary). Assuming they stick together after the collision, how fast will they be moving afterwards, and in which direction?
3. A 3 000 kg minibus travelling west at 10 m/s has a head-on collision with a Challenger 2 tank, mass 62 000 kg, moving east at 2 m/s. If they stick together, which direction will they be moving in after the collision, and how quickly?
