*Politics, Markets, and America's Schools* John E. Chubb, Terry M. Moe, 2011-09-01 During the 1980s widespread dissatisfaction with America's schools gave rise to a powerful movement for educational change and the nation's political institutions responded with aggressive reforms Chubb and Moe argue that these reforms are destined to fail because they do not get to the root of the problem The fundamental causes of poor academic performance they claim are not to be found in the schools but rather in the institutions of direct democratic control by which the schools have traditionally been governed Reformers fail to solve the problem when the institutions ARE the problem The authors recommend a new system of public education built around parent student choice and school competition that would promote school autonomy thus providing a firm foundation for genuine school improvement and superior student achievement **Mathematical Theory and**

, 1894 **Multivariate Approximation for solving ODE and PDE** Clemente Cesarano, 2020-12-07 This book presents collective works published in the recent Special Issue SI entitled Multivariate Approximation for Solving ODE and PDE These papers describe the different approaches and related objectives in the field of multivariate approximation The articles in fact present specific contents of numerical methods for the analysis of the approximation as well as the study of ordinary differential equations for example oscillating with delay or that of partial differential equations of the fractional order but all linked by the objective to present analytical or numerical techniques for the simplification of the study of problems involving relationships that are not immediately computable thus allowing to establish a connection between different fields of mathematical analysis and numerical analysis through different points of view and investigation The present contents therefore describe the multivariate approximation theory which is today an increasingly active research area that deals with a multitude of problems in a wide field of research This book brings together a collection of inter multi disciplinary works applied to many areas of applied mathematics in a coherent manner **Mathematical Combinatorics, Vol. 2/2012** Linfan
