

1. **Introduction**

The purpose of this study is to investigate the effects of the proposed system on the performance of the participants. The study was conducted in a controlled environment with a sample size of 30 participants.

The results of the study show that the proposed system significantly improved the performance of the participants compared to the control group. The improvement was statistically significant at the 0.05 level.

The study also found that the proposed system was easy to use and did not cause any adverse effects on the participants. The results suggest that the proposed system is a viable solution for improving performance.

Further research is needed to confirm the findings of this study and to explore the long-term effects of the proposed system.
