*The Boundaries of Belonging* Bernadette Nadya Jaworsky, 2016-12-09 This book addresses an issue currently making political headlines in the United States immigration. Immigrants have long engendered debates about the boundaries of belonging with some singing their praises and others warning of their dangers. In particular the 11 million unauthorized immigrants in the country provoke heated disagreements with issues of legality and morality at the forefront. Increasingly such debates take place online by organizations in the immigrant rights and the immigration control movements who engage in symbolic work that includes blurring, crossing, maintaining, solidifying and shifting the boundaries of belonging. Based on data collected from 29 national level groups, this book features a cultural sociological analysis of the online materials deployed by social movement organizations debating immigration in the United States.

*National Identity* Richard R. Verdugo, Andrew Milne, 2016-06-01 National identity has been the subject of much controversy and debate. Some have even suggested dropping the concept entirely. One group, Essentialists, argue that national identity is fixed, cultural, based on birth and ancestry. Another viewpoint is posited by Postmodernists who argue that national identity is malleable, invented or imagined. As alternatives, some have suggested that national identity is a hybrid of both Essentialist and Postmodernist views. And still others bypass this argument and suggest that national identity should be based on civic factors such as shared values and norms about citizenship. While controversy and debate are healthy exercises in any science, at some point order must be established if science is to proceed. The present volume is based on the idea that national identity is an ideal type concept; it does not completely capture reality but is used for analytic purposes. In addition, rather than focusing on these theoretical debates, we pursue research with the idea that results from research will contribute to the field of national identity. Three areas of national identity are discussed: theoretical, national, and individual. Two chapters focus on the major theories about national identity; provide critiques and make suggestions about the topic. In section two, six chapters provide case studies of national identity on Scotland, Ireland, Russia, Bosnia Herzegovina, Germany, and France. In section three, two case studies focus on immigrants and the challenges they face in forming their identities, especially identifying with their host countries, Belgium and the United Kingdom. Several important conclusions may be gleaned from the contributions of the present volume. To begin with, while national identity is a slippery concept, if the field wishes to move beyond debate about fundamentals, it would be well advised to view the concept as an ideal type, as suggested by the great German scholar Max Weber. Secondly, the case studies included in the present volume indicate that national identity is not only based on ethnicity and culture but on such external factors as governance regimes and their changes, economic crises, wars, and other forms of aggressive activity and social demographic changes in a population. These factors affect a population at the national level. For immigrants at the individual level, developing national identity is greatly affected by four interrelated factors: 1) the degree to which they are accepted by members of the host society; 2) immigrants' language skills and physical appearances; 3) how well

they are able to balance their host national identity their ethnic identity and acceptance of their native country 4 and their generational status Generally at the national and individual levels context and circumstances matter in developing national identity

Kjaergard,2016-10-14 What does it mean to be a subject of human rights The status of the subject is closely connected with the form and rhetoric of the framing discourse and this book investigates the relationship between the status of the subject and the form of human rights discourse in differing aesthetic and social contexts Historical as well as contemporary declarations of rights have stressed both the protective and political aspects of human rights But in concrete situations and conflictual moments the high moral legitimacy of human rights rhetoric has often clouded the actual character of specific interventions and so made it difficult to differentiate between the objects of humanitarian intervention and the subjects of politics Critically re examining this opposition between victims and agents of human rights through a focus on the ways in which discourses of rights are formed and circulated within and between political societies this book elicits the fluidity of their relationship and with it the shifting relation between human rights and humanitarianism Analysing the symbolic framings of testimonies disaster stories atrocity tales political speeches and philosophical arguments it thus establishes a relationship between these different genres and the political economic and legal dimensions of human rights discourse
